APPENDIX G. Predicted/expected frequency curves

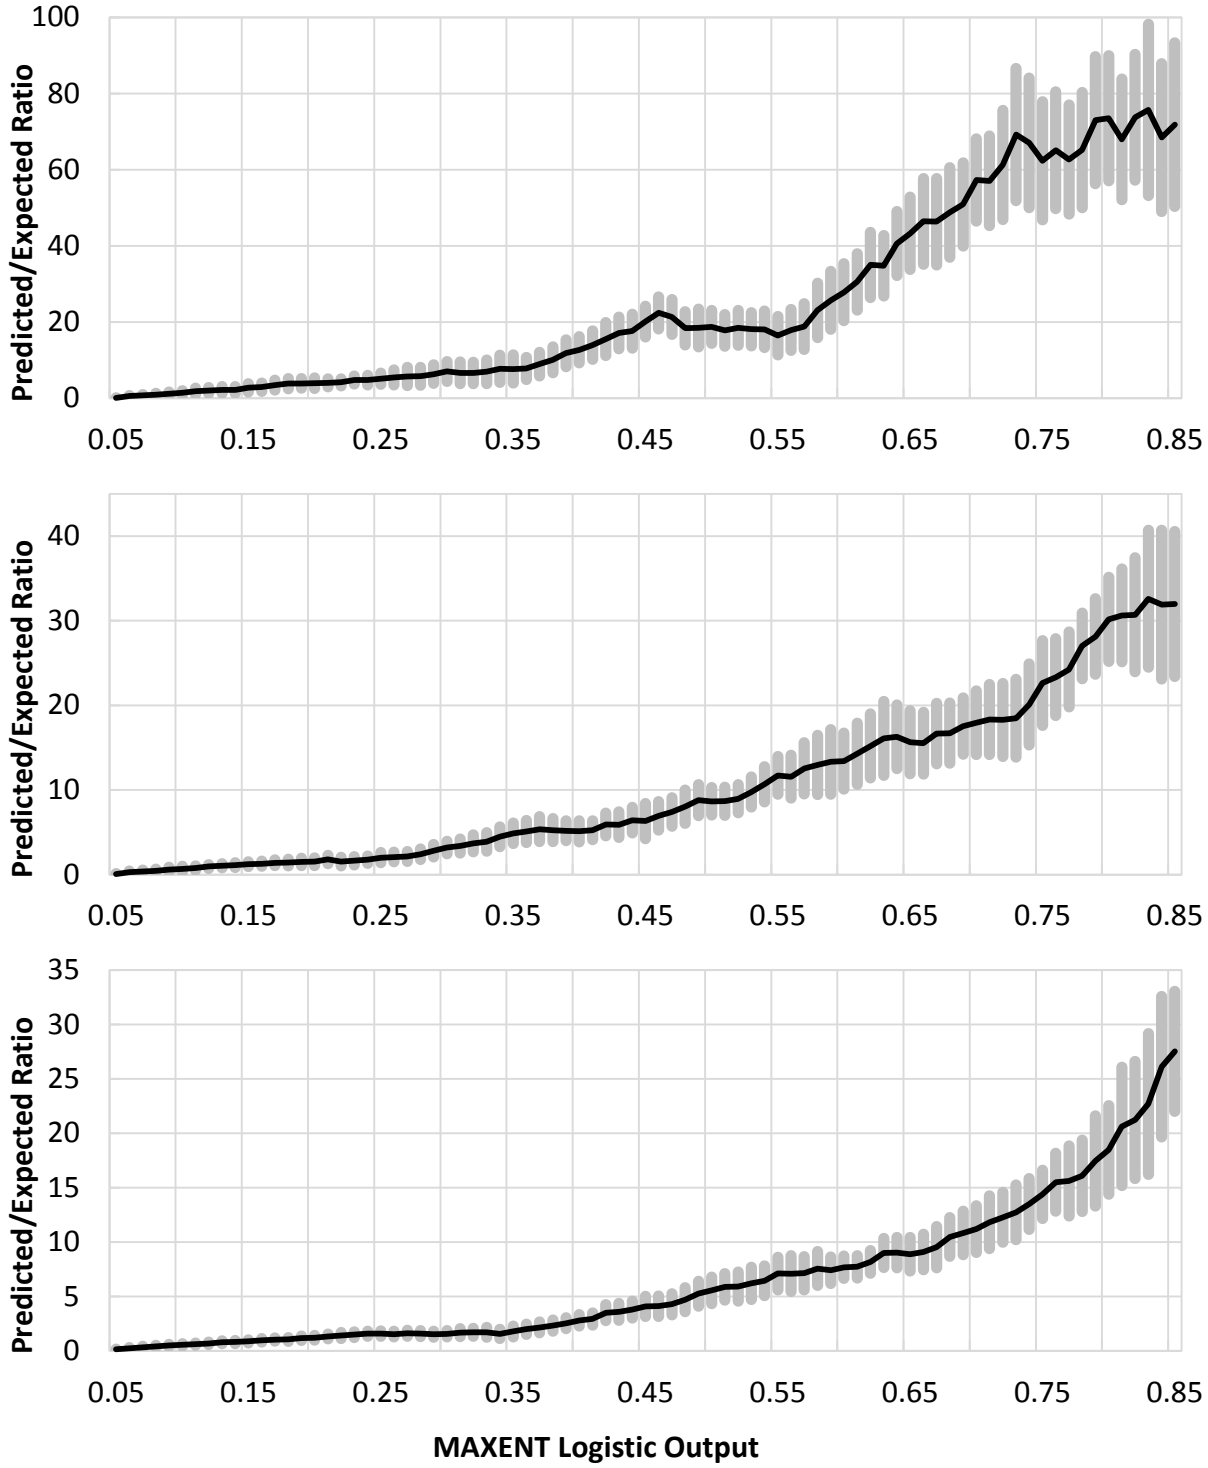

Figure G1. Predicted/expected frequency of test data withheld from model development over a range of MAXENT logistic output scores for full models; nesting (top), roosting (middle), and feeding (bottom). Gray bars represent 95% confidence intervals.

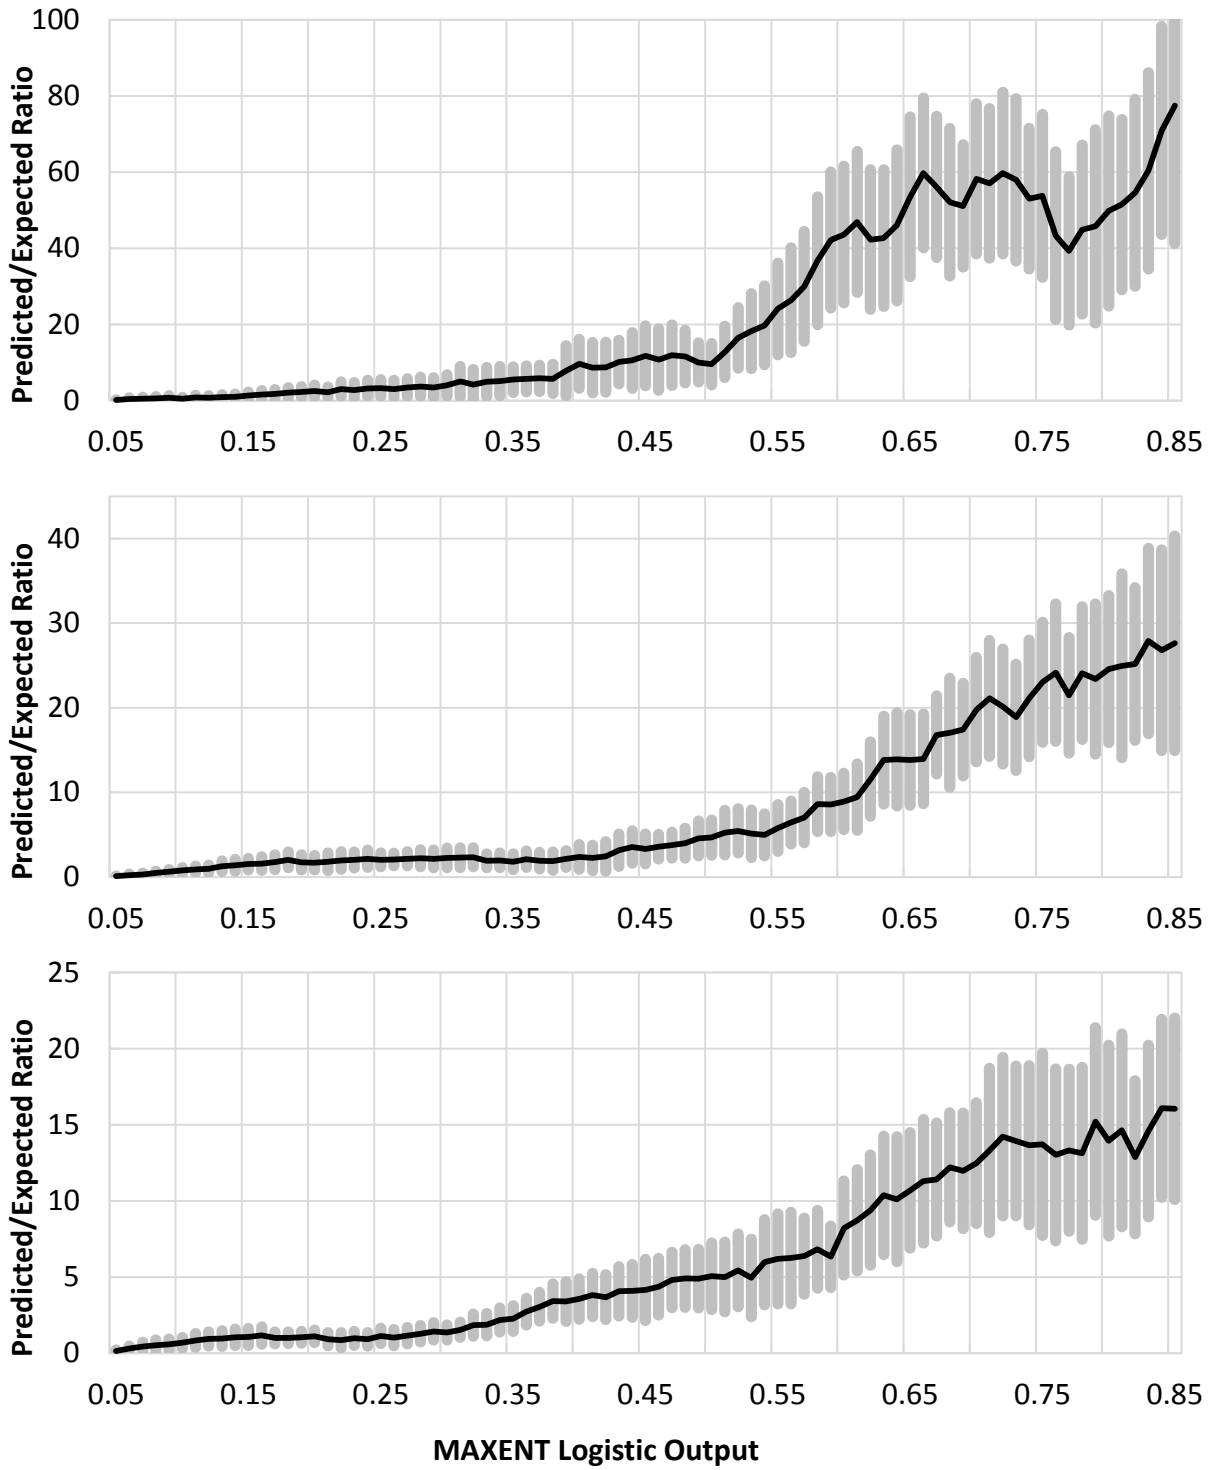

Figure G2. Predicted/expected frequency of test data withheld from model development over a range of MAXENT logistic output scores for thinned models; nesting (top), roosting (middle), and feeding (bottom). Gray bars represent 95% confidence intervals.
