

CHANGES IN GENE EXPRESSION RELATED TO DECLINE OF THE AGING IMMUNE SYSTEM

HHMI Summer 2012
Oregon State University

Student: Jenny Tran
Mentor: Adrian F. Gombart, Ph.D.

My project involves...

Studying age-related changes in gene expression in the bone marrow of aging mice

Background

- Healthy Aging
 - Balance of gene expression
- “Inflamm-aging” (1)

1. Franceschi C, Bonafè M, Valensin S, Olivieri F, De Luca M, Ottaviani E, De Benedictis G. Inflamm-aging. An evolutionary perspective on immunosenescence. Ann N Y Acad Sci. 2000 Jun;908:244-54.

Inflamm-aging

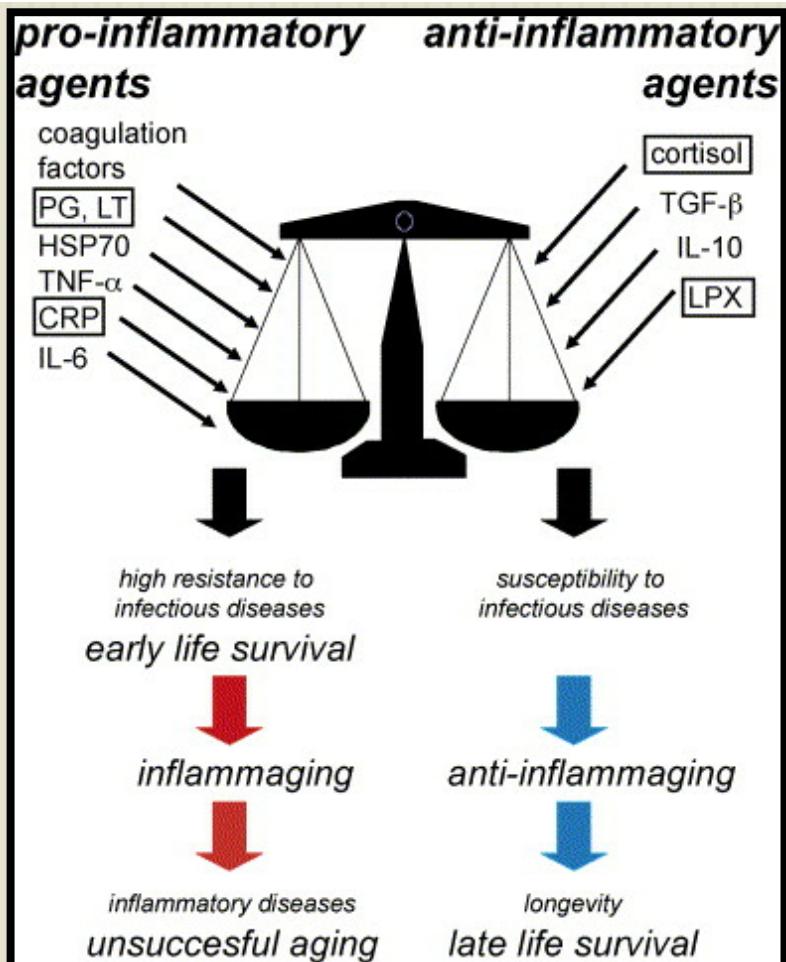

- Low-level inflammatory status/ up-regulation of pro-inflammatory cytokines
- Decline in adaptive immunity
 - ▣ Highly specialized systemic cells and processes that attack pathogens
- Over-active innate immune system
 - ▣ First line of defense
 - ▣ Macrophages and neutrophils (Bone Marrow)

Importance of inflamm-aging

- Contribution to the development of chronic diseases
 - Infections
 - Cardiovascular Disease
 - Neurological Disease

Example: Factors

Franceschi C, Capri M, Monti D, Giunta S, Olivieri F, Sevini F, Panourgia M, Invidia L, Celani L, Scurti M, Cevenini E, Castellani G, Salvioli S. **Inflammaging and anti-inflammaging: A systemic perspective on aging and longevity emerged from studies in humans.** Mech Ageing Dev. 2007 Jan;128(1):92-105. Epub 2006 Nov 20.

Hypothesis

Age-related changes in gene expression in the bone marrow lead to over-activity of the innate immune cells in the aging immune system

Prediction

Changes will either cause down- or up-regulation of genes that are directly involved with innate immune function and inflammation

Significance of Findings

- Gene Expression
- Mechanism

Samples

- RNA
 - Bone Marrow
- “Black 6”
- Ages
 - 3 months
 - 25.5 months

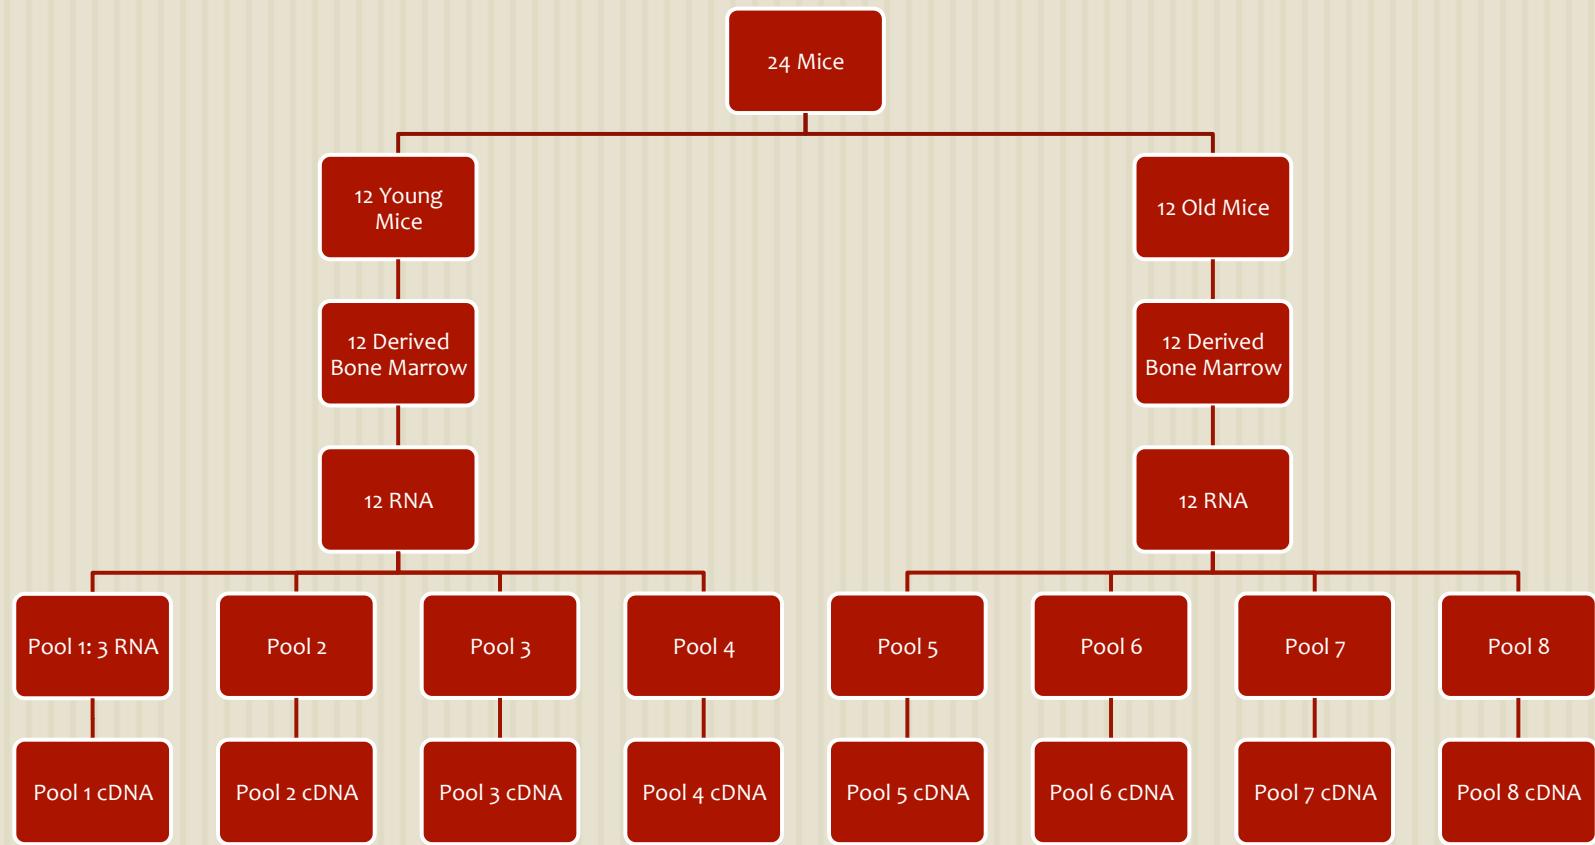

Groups

Samples	Pool #	Age
545, 546B, 547	1	3 months
548B, 549, 550B	2	3 months
535, 536B, 537	3	3 months
538B, 539, 540B	4	3 months
559, 560B, 561	5	25.5 months
562B, 563, 564B	6	25.5 months
553, 554B, 555	7	25.5 months
556B, 557, 558B	8	25.5 months

Overview: Methods

- 
- ① Synthesize complementary DNA (cDNA) from RNA
 - ② DNA microarray analysis
 - ③ Computer analysis of genes

Overview: Methods

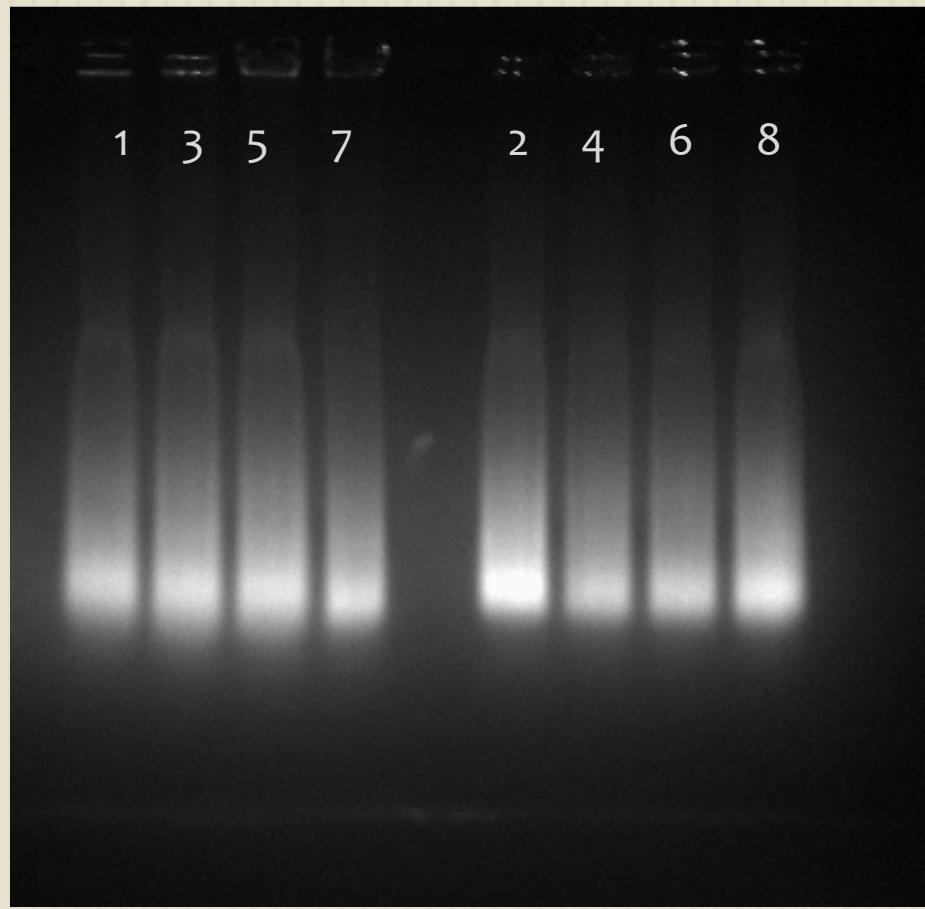

All then labeled, hybridized, and analyzed!

Synthesis of cDNA

- Make complementary DNA (cDNA) from pooled RNA
 - Clean-up
- Labeled using Klenow Fragment, exo-
 - Large fragment of DNA polymerase I
 - Cy3 Dye

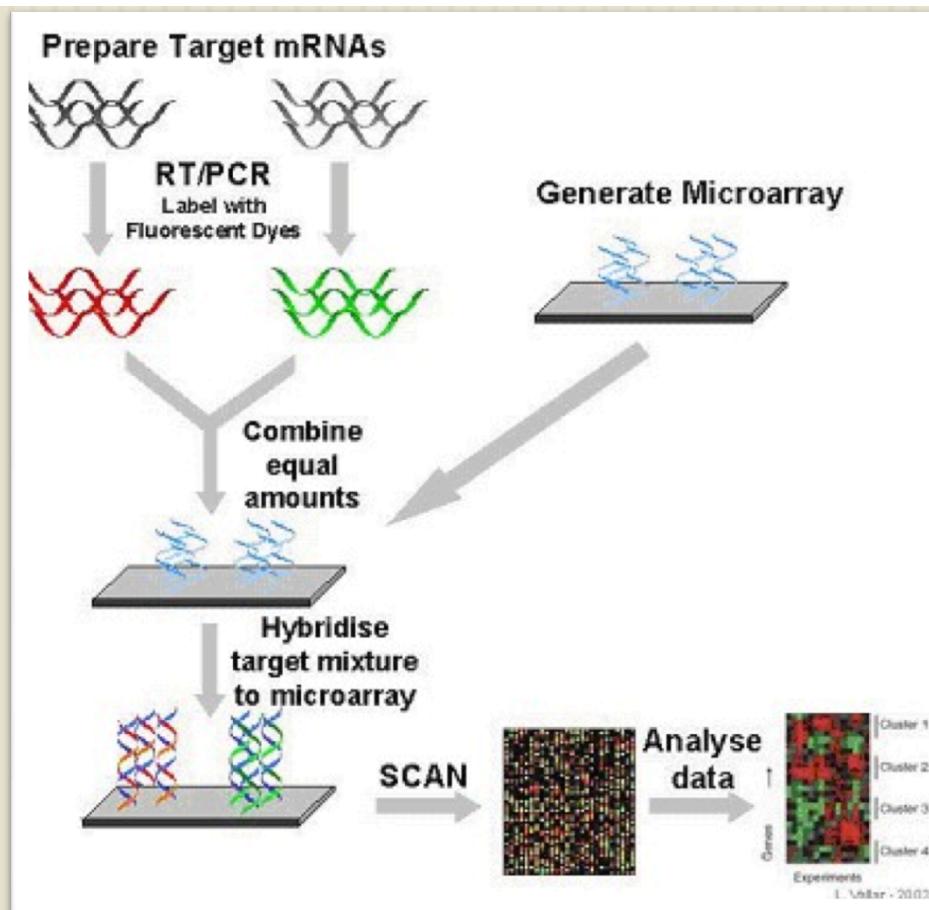

Verification: Labeling

Next step

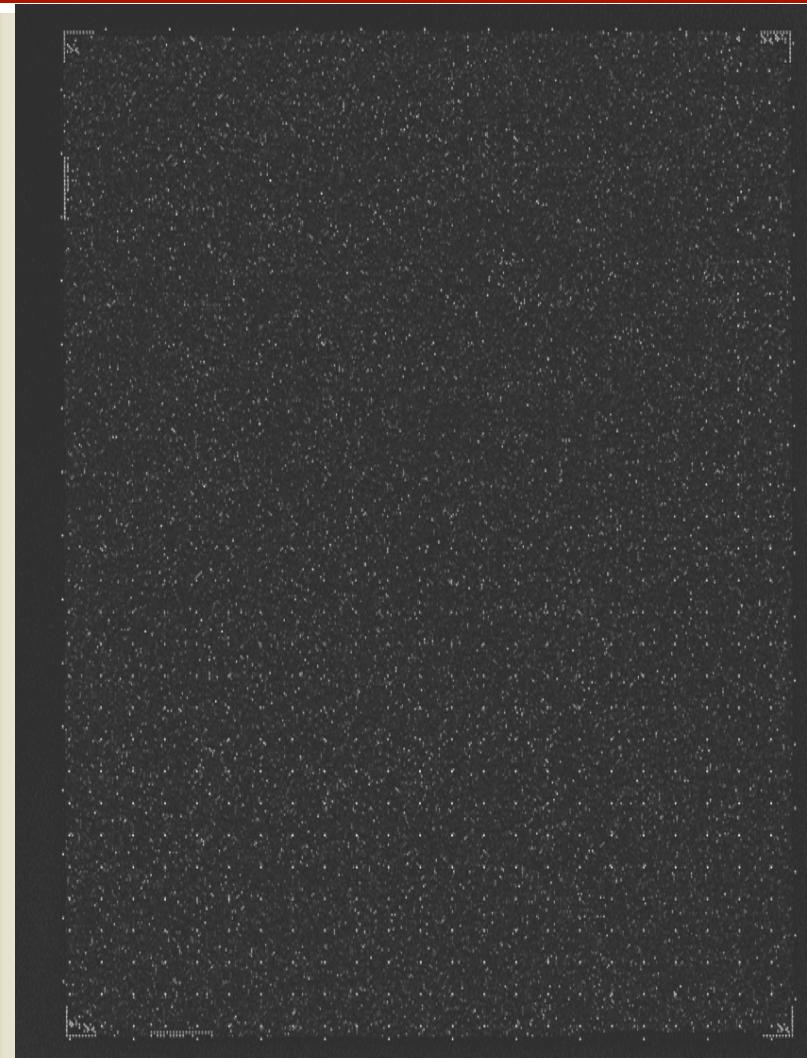

- Hybridization
- Use in DNA microarray

Overview of DNA Microarray

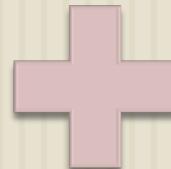

DNA Microarray Analysis

- Collection of microscopic DNA spots
 - Glass microscope slide
- Primary focus:
 - Genes functioning in immunity and inflammation

Example: Microarray

$Y_1 + Y_2$

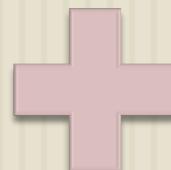

$Y_3 + Y_4$

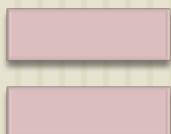

$Y_1 + Y_2 + Y_3 + Y_4$

$O_1 + O_2$

$O_3 + O_4$

$O_1 + O_2 + O_3 + O_4$

Results

- Analyzed total: 44,170 genes
- Of the total: 148 genes
 - ▣ Significantly different between young and old
- Control
 - ▣ Young mice

List of
Genes!

A closer look at a few important genes...

Gene Name	Fold-change	Parametric p-value	Description
Epcam	5.49	3.00E-07	Mus musculus tumor-associated calcium signal transducer 1, mRNA
Gpnmb	2.93	2.10E-05	Mus musculus glycoprotein (transmembrane) nmb, mRNA
Cd5l	2.09	2.94E-05	Mus musculus CD5 antigen-like, mRNA
Ctsc	1.77	0.0008356	Mus musculus bone marrow macrophage cDNA
Slamf1	1.63	0.0002085	Mus musculus signaling lymphocytic activation molecule family member 1, mRNA
Ly6a	1.55	0.002406	Mouse T-cell activating protein (TAP) mRNA, complete cds
Gm2344	0.63	0.0009404	Mus musculus similar to CD79A antigen (immunoglobulin-associated alpha)
Bach2	0.51	5.00E-06	Mus musculus BTB and CNC homology 2 (Bach2), transcript variant 1, mRNA
Fam129c	0.48	2.00E-07	Mus Musculus adult male corpora quadrigemina cDNA

Future Work

- Confirmation
 - RT-PCR
