

Analyzing a new marine business

SG 34 / Revised March 1984

OREGON STATE UNIVERSITY EXTENSION SERVICE

Earning a living from the sea is an irresistible challenge to many people. For some, the result is financial success; for others, it means frustration and failure.

This bulletin presents ideas and procedures that will help make your new marine business successful—if you use them. These ideas and procedures apply equally to commercial fishing, charter fishing, aquaculture, commercial diving, and other marine-oriented businesses.

Although technical considerations are important, this bulletin concentrates on economic and financial matters. Before compiling and analyzing economic information, it is also important to understand your personal and business objectives.

Objectives—and resources to meet those objectives

What are your objectives? Are you primarily interested in a stable income, planned leisure, and regular working hours? You may not be able to realize these objectives through a marine-oriented business.

However, if the chance of a large financial gain, occupational challenge, and personal independence are important objectives, a marine-oriented business may be just right for you.

What are your resources? Even though you may have chosen a marine business that makes sense in terms of your objectives, you still must have sufficient economic resources to start and maintain that business. Your skills and the amount of capital available to you are your economic resources.

Technical skills are important in most marine businesses, but management skills make the difference between financial success or failure. Do you have skills in budgeting, record-keeping, personnel management, financial analysis, tax management, and credit analysis? How effectively can you use these skills?

The successful managers are those who have management skills and know how to use them. Even when a good manager experiences a financial failure, he or she attempts to find the real cause and does not blame it on “low prices,” “government regulation,” “inflation,” “recession,” etc. A good manager analyzes failures as well as successes—and you must be prepared to do the same.

Most management skills are acquired through experience. However, there are valuable management courses offered by Sea Grant programs, Cooperative Extension Services, community colleges, and professional associations. Self-study is another way to improve management skills.

One of the fringe benefits of improving your management skills is that they are also useful in other types of business and in family financial matters.

Capital available to you includes cash on hand and cash available from these sources:

1. savings accounts;
2. stocks and bonds;
3. the productive value of buildings, improvements, and equipment that you can use in your marine business;
4. the market value of other buildings, improvements, and equipment; and
5. the amount of money you can borrow.

A net-worth statement (or balance sheet) can tell you how much capital you have available. Table 1 illustrates a simplified net-worth statement for “A. D. Venture.”

(Although data in this and following tables are based on earlier studies, they are not intended to represent any existing or new marine business.)

On the left in table 1 are *assets*, things that A. D. Venture owns or what is owed him. On the right are *liabilities*, what A. D. Venture owes others. Also on the right is an item called *net worth*. If A. D. Venture sold out, collected all debts people owed him, and paid all debts owed to others, he would have left \$52,050 before taxes. This is his net worth.

From the net-worth statement, we can identify several sources of capital for a new marine business. There are \$2,400 in savings, \$6,000 in bonds, and \$1,800 in stocks, for a total of \$10,200 in cash readily available (assuming the cash and checking account balance are for current living requirement).

Further, A. D. Venture’s financial situation—the balance between assets and liabilities—will allow him to refinance his home mortgage and/or his rental property mortgage to raise additional capital for the new business.

Other venture capital is available through second mortgages on the home or rental or a first mortgage on the land. The sale of all or part of the rental property would also produce capital for a new marine business.

Table 1.—*Net-worth statement for A. D. Venture, January 1, Year 1*

Assets		Liabilities	
Current		Current	
Cash	\$ 100	Demand note	\$ 2,000
Checking	850	Credit card account ...	600
Savings	2,400	Income taxes	1,200
Government bonds	6,000		
Common stocks	1,800		
Cash available from insurance	900		
	<u>\$12,050</u>		<u>\$ 3,800</u>
Other		Other	
Home	\$22,000	Home mortgage	\$18,000
Furniture	3,000	Rental property mortgage	21,000
Clothing	1,000	Truck loan	5,000
Auto	2,500		
Truck	6,300		
Rental property	38,000		
Land	15,000		
	<u>\$87,800</u>		<u>\$44,000</u>
		Net worth	52,050
Total	<u>\$99,850</u>		<u>\$99,850</u>

Three types of projection have proven valuable in analyzing a new marine business:

1. *projected profit and loss*, which predicts the future profitability of the business;
2. *projected cash flow*, which measures the ability of this business to meet cash needs and accumulate cash reserves over time; and
3. *projected net worth*, which measures the long term financial trend.

These projections are illustrated in:

- tables 2 to 4 for a charter fishing business (pages 4-7),
- tables 5 to 7 for a baitfish aquaculture business (pages 8-9), and
- tables 8 to 10 for a commercial fishing business (pages 10-11).

Three considerations

The three primary considerations in starting a marine business are:

1. potential monetary rewards,
2. potential risk, and
3. potential nonmonetary rewards.

It is important to complete an analysis of the first two before you consider number three. Unfortunately, people frequently determine first that fishing for a living is just what they want and then are unrealistic in their analysis of potential monetary rewards and risk.

Nonmonetary rewards can still be important. Few people would choose a marine business that produced only profit— and no personal satisfaction. However, the decision is likely to be more rational and accurate if you look at monetary considerations first.

Financial projections. Before you commit a single dollar to your new marine business, work out on paper the *probable* financial shape of the business for several years, using the best information you have—and the best guesses you can make.

This is what economists call a “financial projection.” The projection may convince you that you shouldn’t even start this business. If that happens, it’s better to suffer a “paper bankruptcy” than to lose all you have in a *real* bankruptcy.

Charter fishing

Profit and loss

Table 2.—*Hypothetical 5-year projected profit-and-loss statement for a charter fishing business*

	Year 1	Year 2	Year 3	Year 4	Year 5
Gross sales	\$26,250	\$33,600	\$35,000	\$37,500	\$37,500
Operating costs					
Labor	2,625	3,360	3,500	3,750	3,750
Charter house	5,250	6,720	7,000	7,500	7,500
Boat	3,000	3,500	4,000	4,200	4,200
Moorage	400	400	450	450	450
Office	500	500	550	550	600
Total	11,775	14,480	15,500	16,450	16,500
Other costs					
Insurance	1,100	1,300	1,300	1,300	1,300
Depreciation	3,300	3,300	3,300	3,700	3,700
Interest ^a	288	3,130	2,450	2,100	1,750
Total	4,688	7,730	7,050	7,100	6,750
Return to labor, manage- ment, and equity ^b	11,390	12,450	13,950	14,250
(Return to labor, manage- ment, and investment) ^c	9,787

^a See table 3 for interest costs.

^b One of several measures of profit, this applies to Years 2 to 5 since interest was paid only on borrowed investment and not equity (or net worth).

^c One of several measures of profit, this applies only to Year 1 since no long term interest was paid—that is, no charge was made for the Year 1 investment.

Profit and Loss. In table 2, gross sales are projected to increase to Year 4 as the charter fishing business's reputation and operator skill are established. Operating costs also increase with increased boat use and inflation.

Interest costs are those projected for long and short term loans (generally, you must repay short term loans within 12 months). You'll find interest costs in table 3, the cash-flow budget.

The return to labor, management, and equity (table 2) is one of several measures of profit. (For a discussion of profit, see Smith, F. J., *How to Calculate Profit in a Fishing Business*, Oregon State University Extension Service, Sea Grant Marine Advisory Program Publication SG 29, reprinted August 1976. No charge for single copy; order from Bulletin Mailing Office, OSU, Corvallis 97331.)

Projections of sales, costs, and profit may be difficult, but they are important. These projections must take into consideration potential markets, supply of labor, supply of equipment, regulations, state of the economy, etc. The assistance of specialists in making these projections can be very helpful, especially if you haven't had much experience in making them.

The type of information presented in table 2 should be based on interviews with other charter boat operators, examination of studies (by charter associations, universities, state officials, Federal agencies, and private consultants), interviews with bankers and accountants, discussions with university (marine advisory) and industry experts, review of trade publications, and your own experience.

You will want your projections to be accurate, but it would rarely be worth the expense (or even possible) to develop perfectly accurate projections. Therefore, it is wise to evaluate, at least subjectively, the accuracy of your projections as you proceed.

When you interview others, determine the basis of their knowledge and ask them how confident they are in their own estimates of the future. When you use published data, find out who conducted the study—and when, how, and why.

If the profit-and-loss projection appears accurate enough, proceed with the rest of your projections. If not, study and refine this projection further.

Cash flow

Table 3.—*Hypothetical 5-year projected cash-flow statement for a charter fishing business*

	Year 1				Year 2				Year 3	Year 4	Year 5
	1st	2nd	3rd	4th	1st	2nd	3rd	4th			
Balance forward	\$ 1,000	\$ 140	\$ 461	\$ 832	\$ 587	\$ 157	\$ 337	\$ 3,557	\$ 277	\$ 3,027	\$ 5,177
Cash inflow											
Charter sales	3,940	7,875	11,800	2,635	5,040	10,080	15,120	3,360	35,000	37,500	37,500
Capital sales								2,000			
Long term borrowing	28,000										
Short term borrowing	5,300				5,000						
Total cash available	38,240	8,015	12,261	3,467	10,627	10,237	15,457	8,917	35,277	40,527	42,677
Cash outflow											
Operating costs	1,700	3,595	5,300	1,180	2,170	4,350	6,520	1,440	15,500	16,450	16,500
Insurance		1,100				1,300			1,300	1,300	1,300
Income taxes		200	200	200	400	400	400	400	2,100	2,400	2,600
Capital purchases	35,000							5,000		2,000	
Long term principal payments...					3,500				3,500	3,500	3,500
Long term interest					2,800				2,450	2,100	1,750
Short term principal payments ..		1,000	4,300			2,000	3,000				
Short term interest		159	129			150	180				
Family living withdrawal	1,400	1,500	1,500	1,500	1,600	1,700	1,800	1,800	7,400	7,600	7,900
Total cash outflow	38,100	7,554	11,429	2,880	10,470	9,900	11,900	8,640	32,250	35,350	33,550
Net cash	140	461	832	587	157	337	3,557	277	3,027	5,177	9,127

Cash Flow. In table 3, the cash expected to flow in and out of this charter fishing business is projected quarterly for Year 1 and Year 2, and annually for Years 3, 4, and 5. This projection indicates a need for short term loans of \$5,300 in the first quarter of Year 1 and \$5,000 in the first quarter of Year 2.

These loans will enable the manager to meet cash obligations in these and later quarters without financial embarrassment—or even bankruptcy!

Cash flow is derived from sales (see table 2, the projected profit-and-loss statement), the long term loan for purchase of boat and equipment, short term loans as needed, and sales of capital items. Projected operating costs are taken directly from table 2.

Projected capital purchases include the boat and equipment in Year 1, a new truck in Year 2, and replacement gear in Year 4. Most of the data in this cash-flow projection are based on the profit-and-loss statement, on known or easily determined repayment terms, and on personal projections.

Long term principal and interest payments are those you'll find in your loan contract. Short term principal and interest payments are those you make when cash is available. Family living withdrawals are a projection of shelter, food, clothing, and entertainment needs for your family. The increase in family living requirements reflects inflation and a growing family.

Note that the charter business in this example produces enough cash in the first several years to keep short term borrowing and interest costs to a minimum.

By comparison, short term borrowing costs for the aquaculture business illustrated in tables 5 to 7 (pages 8-9) are substantial, as little cash is generated in this business for the first 1 ½ years.

Net worth

Table 4.—Hypothetical 5-year projected net-worth statement for a charter fishing business

	Year 1	Year 2	Year 3	Year 4	Year 5
Assets					
Current					
Cash	\$ 1,000	\$ 587	\$ 277	\$ 3,027	\$ 5,177
Accounts receivable	600	2,200	3,300	5,700
Other					
Boat and equipment	32,700	30,400	29,100	28,400
Truck	4,000	3,000	5,000	4,000	3,000
Building and improvements	21,000	21,000	21,000	21,000	21,000
Total assets	26,000	57,887	58,877	60,427	63,277
Liabilities					
Current					
Accounts payable
Short term notes
Other					
Boat mortgage	28,000	24,500	21,000	17,500
Total liabilities	28,000	24,500	21,000	17,500
Net worth	26,000	29,887	34,377	39,427	45,777

Net worth. Table 4 illustrates the projected asset, liability, and net-worth data for the same hypothetical charter fishing business illustrated in tables 2 and 3. Each column represents the financial situation on January 1 of that year. Current cash assets are the same as the beginning cash balance taken from table 3, the projected cash-flow statement.

Boat and equipment values, as well as the truck value, decrease according to the depreciation shown in table 2—these are, therefore, “book values.” When a new truck replaces the old one in Year 2 and new gear replaces old in Year 4, the book value increases show up in the net-worth statement for the following January 1.

The net-worth increases from one year to the next because of that year’s profit after deducting nonbusiness expenses (family living). Some of the profit appears as increases in truck value in Year 3 and as increases in accounts receivable in Years 2, 3, 4, and 5.

Profit is also used to decrease the boat mortgage each year. Net worth is projected to increase from \$26,000 in Year 1 to \$45,777 in Year 6.

The accuracy of this projection depends heavily on the accuracy of the projected profit-and-loss and cash-flow statements.

For our illustration, this charter fishing business is projected to support a family adequately for 5 years and to be worth \$19,777 more at the end of those 5 years than at the beginning.

The market value of buildings and improvements may increase during this period and add to net worth. This happens because of real estate market factors—not because of the management and operation of the charter business. Don’t use these changes in real property values to conceal the management and operation successes or failures, unless your primary purpose is to speculate on real property values.

Making your decision

If your projected profit and loss, cash flow, and net worth meet your objectives, then it is appropriate to weigh the nonmonetary factors and make the "Go/No Go" decision.

However, further analysis may be desirable. For example, will another similar business yield more favorable projections?

Once you have developed the skill to make the projections described above, it will be less time-consuming and costly to do the same for several potential new marine businesses.

You can then make your final decision with more accuracy and confidence by comparing several new marine businesses.

(Tables 5 to 10 illustrate projected profit and loss, projected cash flow, and projected net worth for two other marine businesses, a hypothetical baitfish aquaculture business and a hypothetical commercial fishing business. You can interpret and use this information in a manner similar to the way you handled the information above on the charter fishing business.)

Making a "Go/No Go" decision may be the most difficult part of starting a new marine business. No matter how carefully you develop your projections, there will always be risks in a new business.

But the decision must be made . . . you are the decisionmaker . . . and it is you who will suffer the losses or reap the benefits.

Baitfish aquaculture

Profit and loss

Table 5.—*Hypothetical 5-year projected profit-and-loss statement for a baitfish aquaculture business*

	Year 1	Year 2	Year 3	Year 4	Year 5
Gross sales	\$ 8,000	\$91,000	\$130,000	\$130,000
Operating costs					
Labor	\$ 1,000	5,100	9,000	10,000	11,000
Maintenance	50	200	650	900	1,000
Utilities	200	500	600	600	600
Advertising	250	600	800	800	800
Office	100	150	250	250	300
Total	1,600	6,550	11,300	12,550	13,700
Other costs					
Insurance	1,800	2,000	2,000	2,000	2,000
Depreciation	7,000	7,000	8,000	8,000	8,000
Interest ^a	12,000	14,677	10,800	9,600
Total	8,800	21,000	24,677	20,800	19,600
Return to labor, management, and equity ^b	-19,550	55,023	96,650	96,700
(Return to labor, management, and total investment) ^c	-10,400

^a See table 6 for interest costs. Interest is charged on short term loans as they are repaid and on the property mortgage annually.

^b One of several measures of profit, this applies to Years 2 to 5 since interest was paid only on borrowed investment and not equity (or net worth).

^c One of several measures of profit, this applies only to Year 1 since no interest was paid—that is, no charge was made for the Year 1 investment.

Cash flow

Table 6.—*Hypothetical 5-year projected cash-flow statement for a baitfish aquaculture business*

	Year 1				Year 2				Year 3	Year 4	Year 5
	1st	2nd	3rd	4th	1st	2nd	3rd	4th			
Balance forward	\$ 5,000	\$93,200	\$ 700	\$ 500	\$ 500	\$ 500	500	\$ 450	\$ 500	\$11,073	\$83,723
Cash inflow											
Baitfish sales					1,000	2,000	2,000	3,000	91,000	130,000	130,000

The Oregon State University Extension Service provides education and information based on timely research to help Oregonians solve problems and develop skills related to youth, family, community, farm, forest, energy, and marine resources.

Extension's Marine Advisory Program provides education, training, and technical assistance to people with ocean-related needs and interests. Major efforts are concentrated in the areas of fisheries and wildlife, marine engineering, food science and technology, economics, business, resource management, education, and recreation.

This publication was prepared by Frederick J. Smith, Extension marine economist, Oregon State University.

Extension Service, Oregon State University, Corvallis, O. E. Smith, director. This publication was produced and distributed in furtherance of the Acts of Congress of May 8 and June 30, 1914. Extension work is a cooperative program of Oregon State University, the U. S. Department of Agriculture, and Oregon counties.

Extension's Marine Advisory Program is supported in part by the Sea Grant Program, National Oceanic and Atmospheric Administration, U.S. Department of Commerce.

Oregon State University Extension Service offers educational programs, activities, and materials without regard to race, color, national origin, or sex as required by Title VI of the Civil Rights Act of 1964 and Title IX of the Education Amendments of 1972. Oregon State University Extension Service is an Equal Opportunity Employer.
