

SI Appendix 3 Figure: Coefficient in housing density within each of the nine largest forested ecoregions of the coterminous U.S., 1970-2000. The ecoregions with lowest housing density (Southern Rocky Mountain Mixed forest and Sierra Mixed Forest-Steppe) exhibit stable or increasing variance in housing density, while the four ecoregions with highest housing density (Outer Coastal Plain, Southeast Mixed Forest, and the Eastern Broadleaf Forests) exhibit declining variance in housing density.
