

Figure S2. Multilocus sequence typing (MLST) of sugarcane endophytic *Burkholderia* sp. TC3.4.2R3. Unrooted neighbor-joining tree (Jukes & Kantor, 1969) based on MLST (*atpD*, *gltB*, *gyrB*, *recA*, *lepA*, *phaC* *trpB*) data of *Burkholderia* species. Type strains are designed with T after the name. The numbers in the branches indicate the bootstrap values, which were calculated after 1000 replications. The scale bar indicates 0.02 substitutions per nucleotide position.
