

**THE REPRODUCTIVE ECOLOGY OF
BROADLEAVED TREES AND SHRUBS:
ASSOCIATED LITERATURE**

by

**Edward C. Jensen and
Debra J. Anderson**

College of
Forestry

Forest Research Laboratory
Oregon State University

The Forest Research Laboratory of Oregon State University was established by the Oregon Legislature to conduct research leading to expanded forest yields, increased use of forest products, and accelerated economic development of the State. Its scientists conduct this research in laboratories and forests administered by the University and cooperating agencies and industries throughout Oregon. Research results are made available to potential users through the University's educational programs and through Laboratory publications such as this, which are directed as appropriate to forest landowners and managers, manufacturers and users of forest products, leaders of government and industry, the scientific community, and the general public.

The Authors

Edward C. Jensen is an assistant professor in the Department of Forest Resources, College of Forestry, Oregon State University, Corvallis, Oregon. Debra J. Anderson is a forester and natural resource educator for the USDA Forest Service, Umpqua National Forest, Roseburg, Oregon.

To Order Copies

Copies of this and other Forest Research Laboratory publications are available from:

THE REPRODUCTIVE ECOLOGY OF BROADLEAVED TREES AND SHRUBS: ASSOCIATED LITERATURE

The following list of references was developed in support of an educational package on the reproductive ecology of broadleaved trees and shrubs in the Pacific Northwest. It emphasizes ecological characteristics and relationships, although some references on management and uses are included. The list is by no means exhaustive; it is intended to serve as an entry into the vast literature that surrounds the broadleaved trees and shrubs of the Pacific Northwest. The list is divided into two basic sections: 1) general references, with information on a wide array of species, and 2) sections on individual species, with information on one or a small group of species.

Additional Notes

Educational Package

This leaflet is part of a larger educational program on the reproductive ecology of Pacific Northwest broadleaved trees and shrubs. The complete program consists of two audio-visual components—a videotape on the reproductive ecology of broadleaved trees and shrubs and a series of slide-tapes on shrub identification—and four printed components: 1) an overview of plant reproduction, 2) a series of leaflets on PNW trees and shrubs, 3) a glossary of relevant terms, and 4) a list of associated literature. To obtain the complete educational package, contact: Forestry Media Center, College of Forestry, Oregon State University, Corvallis, OR 97331, (503) 737-4702. To obtain only the printed documents, contact: Forestry Publications Office, Forestry Research Laboratory, Oregon State University, Corvallis, OR 97331-7401.

Jensen, E.C., and D.J. Anderson. 1995. THE REPRODUCTIVE ECOLOGY OF BROADLEAVED TREES AND SHRUBS: ASSOCIATED LITERATURE. Forest Research Laboratory, Oregon State University, Corvallis. Research Publication 9g. 6 p.

Broadleaved trees and shrubs are an integral part of Pacific Northwest forests. In order to manage them, we need to understand how they grow, reproduce, and respond to disturbance. This paper is part of a complete educational package on the natural history and reproductive ecology of Pacific Northwest broadleaved trees and shrubs. Included in the package are a videotape, three slide-tapes, and a series of printed publications. Each printed publication includes a list of citations used directly in its development. In addition, many other publications contributed to the complete series and may assist readers in further exploration of the concepts and species described in this program. This list of Associated Literature contains a selection of these references.
