

Current Status of Fishery Statistics Released Through FAO Yearbook of Fishery Statistics

Tadashi Yamamoto
Former FAO Senior Fishery Statistician

As the result of careful study on the above status, the current status of fishery statistics are summarized as follows:

- i) A routine survey has been well maintained in Malaysia, Indonesia, Singapore and the Philippines. However, the Philippines has no area breakdown within the country.**
- ii) The survey in Thailand, which was once well developed, is likely to have collapsed considerably.**
- iii) Fishery statistics of Vietnam is totally FAO estimate.**
- iv) No standard species classification for all Southeast Asian countries has yet been developed.**
