Animal waste complaints
How the process works

M.I. Gangwer, M.J. Gamroth, and D. Wilkinson

Production agriculture continues to be a challenging and rewarding way of life. But with this way of life comes new problems as we do business in a changing environment. With an increased awareness of our natural resources, people are interested in keeping our environment not only clean but also capable of supporting a desirable lifestyle.

For owners of livestock facilities, there are many production issues to deal with. Recently in Oregon, an awareness of animal waste and how to manage this product has caused many owners to examine their facilities.

Oregon law prohibits discharging of animal waste into the waters of the State. Oregon law also requires certain livestock owners in the State to obtain a Confined Animal Feeding Operation (CAFO) permit with the Oregon Department of Agriculture (ODA).

The permit is required from the Oregon Department of Environmental Quality (DEQ), but ODA provides permit evaluation and distribution. Under certain conditions—like adverse weather, poorly designed facilities, or a lack of proper management—animal wastes can contaminate Oregon's water. This occurs on facilities with and without a CAFO permit.

For the purpose of this publication, a complaint can be filed against any livestock owner who may be suspected of discharging animal wastes into Oregon's waters.

Agencies involved

Before we outline the complaint process, here's a quick look at the five agricultural agencies, and the one non-agricultural agency, involved.

The Oregon Department of Agriculture (ODA) administers the complaint process. ODA’s Division of Natural Resources determines which complaints are valid; then it may direct them to the appropriate agency for further action.

Oregon’s 45 Soil and Water Conservation Districts (SWCD) are local subdivisions of State government that help farmers by coordinating technical and financial assistance to solve resource problems. The local SWCD works with ODA in conducting the initial complaint investigation, and it continues to work with the livestock owner to resolve waste management problems.

The U.S. Department of Agriculture (USDA) Soil Conservation Service (SCS) provides technical assistance to livestock owners in developing the best management practices and facilities that an animal waste management plan must contain.

The ODA Agricultural Stabilization and Conservation Service (ASCS) provides cost-share assistance to livestock owners who meet certain guidelines.

Oregon State University Extension Service (OSUES) delivers education and technical assistance, and works with the four agencies above in developing standards and specifications for use in developing animal waste management plans.

The Oregon Department of Environmental Quality (DEQ) refers all complaints to the ODA (unless the complaint is against an owner under an individual DEQ permit), and serves as the enforcement arm of State government. Livestock owners who continue contaminating the State's water can be levied a civil penalty and fined by DEQ.

ODA tries to work cooperatively with the operator to resolve animal waste problems. DEQ may assess civil penalties if cooperative efforts fail to resolve the problems.

All owners seek a cooperative solution to animal waste problems rather than enforcing changes through legal action and fines.

Steps in the process

On pages 2 and 3, you’ll find a flow chart that describes the various steps and actions taken if a complaint is filed by a public individual or by a government agency.

Your responsibility

Well designed and managed animal waste systems will help you avoid complaints filed against your livestock operation. Plan ahead and seek advice from the Extension Service and your local Soil and Water Conservation District personnel in designing your animal waste storage and handling system.

(text continues on page 4)

Michael I. Gangwer, Extension agent (dairy), Marion County; and Michael J. Gamroth, Extension dairy specialist, Oregon State University; and David Wilkinson, project coordinator, Division of Natural Resources, Oregon Department of Agriculture, Salem.
Steps in handling animal waste complaints

Complaint received

Complaints of animal waste impacting state waters must be registered with the Oregon Department of Agriculture (ODA), Natural Resources Division. An initial investigation which may include photographs and water samples, is conducted by the local Soil and Water Conservation District (SWCD), where trained personnel are available. In those areas where the SWCD is not able to assist or where the complaint occurs on operations with previous discharge problems, the ODA conducts the investigation.

SWCD provides initial report, photographs, and water samples

or

ODA reviews report, may conduct further investigation

If a facility is operating under an existing stipulated order, ODA conducts the investigation.

Valid complaint?

The ODA makes this decision based on knowledge of the facility, SWCD and ODA investigations, and a review of the CAFO permit if one is on file.

Letter of Compliance

This letter is mailed to the livestock owner if the complaint is considered invalid.

Notice of Noncompliance (NON)

This is a formal notice to the livestock owner of the violation. The notice schedules a date for discussion of best management practices to bring the facility into compliance, and describes to the owner the consequences of noncompliance.

Cooperation?

The livestock owner agrees to cooperate with ODA and related agricultural agencies in bringing the facility into compliance. The process for cooperating owners continues on the top of the next page. If the owner is uncooperative, ODA may turn over the complaint to DEQ for possible civil penalty, as indicated at the bottom of the next page.
Violation magnitude: Minor

ODA determines this is a one-time accident resulting in a discharge, or a minor design problem that can be easily corrected by the livestock owner.

Violation magnitude: Significant

ODA determines the complaint is the result of a significant discharge into the state's water. The facility may require significant design improvement or an increased awareness by management of an ongoing discharge problem. A stipulated order is necessary.

Stipulation and Final Order

This is a formal document negotiated by ODA with the livestock owner and the DEQ. They agree on a schedule of best management practices and a timetable for their implementation. The state and federal agencies (SCS, ASCS, OSU Extension, ODA and the local SWCD) may be involved in implementing the best management practices.

One advantage of the stipulated order is that, if the livestock owner is complying with its conditions, further enforcement action is suspended. One condition of all stipulated orders is the formation or updating of an animal waste management plan.

Compliance?

The ODA determines if best management practices have been adequately implemented, if the livestock operation is not discharging into the state's water, and if the owner has accomplished these within the time frame stated in the stipulated order. The stipulated order is in effect for twelve months after the best management practices have been fully implemented to ensure the operation is in compliance with water quality standards.

Stipulated order expires if facility is in compliance

Stipulated order is not in compliance: ENFORCEMENT REQUIRED

ODA determines the livestock owner has not complied with the conditions of the stipulated order. The complaint report, investigative results and other data are turned over to the DEQ for action.

DEQ civil penalty and DEQ department order

A DEQ penalty and order are determined, including a schedule of best management practices as determined by the DEQ. Compliance with the DEQ department order is determined by the DEQ, and non-compliance may result in further action, including penalties and fines, by the DEQ.

THIS PUBLICATION IS OUT OF DATE.

For most current information: http://extension.oregonstate.edu/catalog
Plan for some herd or flock expansion. Livestock prices will probably require that you manage more animals in the future.

If a complaint is made against your operation, get some advice! Seek the most economical solution to the problem by cooperating with the agency that's investigating the complaint. Improve your facilities to prevent further complaints.

OSU Extension publications for livestock owners

The following publications may help you design and operate a successful waste management program. They're available from:

Publications Orders
Agricultural Communications
Oregon State University Administrative Services A422
Corvallis, OR 97331-2119

Shipping and handling: For single copies of any publication listed here (and for orders up to $2.50), please include 25¢. For orders between $2.50 and $100, include 15%.

EC 1077, Managing pastures in western Oregon, by T.E. Bedell. Revised 1986. 75¢
EC 1094, Calculating the fertilizer value of manure from livestock operations, by J.A. Moore and M.J. Gamroth. Revised 1991. 75¢
EM 8412, Managing dairy grazing for the most efficient yields, by L.E. Cannon, M.J. Gamroth, and P.J. Ballerstedt. 1990. 50¢
FG 74, A list of analytical laboratories serving Oregon, by J. Hart. Revised 1990. No charge.
PNW 307, Troubleshooting a mechanical ventilation system for livestock or poultry housing, by J.A. Moore. 1986. 50¢
PNW 321, Designing dairy free stalls, by M.J. Gamroth and J.A. Moore. 1987. 25¢
WREP 110, Understanding the basics of managing dairy labor, by M.J. Gamroth. 1989. 25¢

In preparing this publication, the authors have used the best and most current information. However, neither they nor the OSU Extension Service can assume any liability for the process outlined here.

Extension Service, Oregon State University, Corvallis, O.E. Smith, director. This publication was produced and distributed in furtherance of the Acts of Congress of May 8 and June 30, 1914. Extension work is a cooperative program of Oregon State University, the U.S. Department of Agriculture, and Oregon counties.

Oregon State University Extension Service offers educational programs, activities, and materials—without regard to race, color, national origin, sex, age, or disability—as required by Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Oregon State University Extension Service is an Equal Opportunity Employer.
