Circular of Information No. 161

November, 1936

RELATIVE AVERAGE PRICES RECEIVED BY FARMERS  
IN OREGON, BY COUNTIES AND DISTRICTS, 1926-1935\*

These data are not market quotations for any certain grade or kind of product at any particular point in the county or district for which they are given--they are intended to indicate the general average relative farm price level during the 1926-1935 period, in the various counties and districts in Oregon. Together with production and marketing statistics, farm price data are valuable in calculating the trend in farm income and the relative importance of various enterprises in the agricultural industry, and they are valuable in regard to the marketing of farm products.

\*These price data were prepared in fulfillment of Works Progress Administration Project No. 569 (O.P. 65-94-776), under the direction of L. R. Breithaupt, Extension Agricultural Economist, Oregon State College, serving as State Supervisor of Rural Research. The county and district data are straight averages of monthly and yearly average prices, as prepared and estimated by J. W. Deremiah, project supervisor, assisted by Eivera Horrell, statistical secretary in the office of the extension agricultural economist.

The estimates are based largely upon figures taken from records loaned for the purpose by the United States Department of Agriculture, Division of Crop and Livestock Estimates, Bureau of Agricultural Economics. These records resulted from the reports made monthly by voluntary farm price reporters, which are used in preparing the weighted estimated average farm prices which are published each month on a statewide basis but not by counties or districts.
