OREGON'S FARM-RAISED POULTRY PRODUCTS*
 AGRICULTURAL STATISTICS
 1947, 1948, 1949p

This circular is published as a supplement to Extension Bulletin 678, "Oregon's Farm-Raised Poultry Products 1909-1947," published in September 1947. In addition to supplying later information, an attempt has been made to show, by counties, statistics on production, average farm price, and cash receipts from farm marketings for chickens, chicken eggs, turkeys, and turkey eggs and poults.

Table 1 below shows an estimate of cash receipts from farm marketings of all poultry and poultry products, by counties, Oregon, 1948.

p Preliminary

1/ County estimates prepared by Oregon State College Extension Service and adjusted to state totals published by the U. S. Department of Agriculture, Bureau of Agricultural Economics.

The estimates in table 1 do not include value of poultry or poultry products consumed on farms but are intended to represent income to farmers from the sale of these products. As can be seen from this table, the Willamette Valley, District 1, accounted for about 70 per cent of all cash receipts in the state in 1948. Marion county with nearly 5 million dollars led other counties of the state followed by Clackamas, Lane, Yamhill, Washington, and Linn.

In table 2 an estimate is made, by counties, to show total production, average farm price, and cash receipts from farm marketings of chickens in 1948. In this year production in Clackamas and Lane counties, District 1, was estimated to be over 2 million pounds. Other counties reporting chicken production in excess of 1 million pounds were Marion, Washington, Douglas, Linn, and Yamhill. In cash receipts District 1 accounted for about 58 per cent of the income from the sale of chickens.

As can be seen from table 3, 62 per cent of all chicken eggs produced in the state in 1948 were produced in the Willamette Valley, District 1. Next highest producing district was the Southern Oregon counties, District 3, 13 per cent; followed by the Coast and Lower Columbia counties, District 2, 8 per cent; the Snake River Basin counties, District 5, 5 per cent. Lane county in District 1 led other counties in both total production and cash receipts from farm marketings of chicken eggs in 1948. Other counties with production estimates of over one million dozen eggs were Clackamas, Washington, Marion, Douglas, Linn, Yamhill, Jackson, Malheur, Clatsop and Multnomah.

Yamhill, Marion, Linn, and Clackamas counties in District 1 accounted for more than half of the total production of turkeys in the state in 1948 as shown in table 4. In cash receipts Yamhill county was high with 17 per cent of the state total. The Willamette Valley, District 1, accounted for about 76 per cent of both total production and cash receipts from sale of turkeys in 1948.

Table 4. Turkeys: Estimate of Total Production, Average Farm Price, and Cash Receipts from Farm Marketings, by Counties, Oregon, 1948p 1/

County	Total production ^{2/} Pounds	Average farm price per pound Cents	Cash receipts from farm marketings Dollars

Umatilla	1,285,000	45.0	512,000
Deschutes	1,780,000	45.0	710,000
Klamath	277,000	44.9	110,000
Other counties	794,000	44.0	310,000
State Total	29,173,000	44.4	\$11,477,000

p Preliminary

1/ County estimates prepared by Oregon State College Extension Service and adjusted to state totals published by the United States Department of Agriculture, Bureau of Agricultural Economics.

2/ Live weight.

Farm income from the sale of turkey eggs and poults, while not of too great importance in the eastern part of Oregon, is a fairly important item in the Willamette Valley, as can be seen from table 5. Yamhill county was reported to have been the leading county in the state in 1948 both in turkey hatching eggs sold and turkey poults sold. Average prices received by farmers from the sale of turkey eggs and poults were fairly uniform between counties in the Willamette Valley with turkey eggs at 35 cents and turkey poults at 85 cents each.

Table 6 shows the estimated number of chickens on hand, by counties in Oregon, as of January 1, 1947, 1948, and 1949. The Willamette Valley, District 1, was the leading district in number of chickens on hand January 1, 1949 with an estimated 57 per cent of the state total. Clackamas county in District 1 was the high county followed by Lane, Marion, and Washington. In eastern Oregon, Malheur county in District 5 led other counties in this section, followed closely by Umatilla and Klamath.

From the data in table 7 it can be seen that there were less turkeys raised in the state in 1948 than in 1947 but more in 1949 than in 1948. Percentagewise the change by districts as comparing 1949 with 1948 was as follows: District 1, 9 per cent increase; District 2, 13 per cent decrease; District 3, 49 per cent increase; District 4, 5 per cent decrease; District 5, 2 per cent increase; and District 6, 39 per cent decrease. Yamhill county in District 1 accounted for the largest number of turkeys raised in 1949. It will be noted that 90 per cent of all turkeys raised in the state in 1949 were raised in western Oregon.

Table 8 lists number of ducks raised by counties in the state in 1947, 1948, and 1949 while table 9 shows geese raised. No great change has occurred in either duck or geese population between 1947 and 1949 in the state. It will be noted, however, that there was an increase in geese while ducks decreased. Neither of this type of poultry is raised on a large commercial scale in the state. Some farms keep small flocks and a small number are kept on quite a few scattered farms throughout the state.

Table 10 is a tabulation by counties in Oregon of egg production in 1934, 1939, and 1944. This information was compiled from United States Census of Agriculture publications of 1935, 1940, and 1945.

Table 11 in this circular is a breakdown of cash income to farmers in Oregon from 1940 to 1949 received from the sale of all poultry and poultry products. As can be seen from the table the total cash receipts from farm marketings in 1949 for all products listed were down 11 per cent from the 1948 total and down 5 per cent from the 1945-1949 average. The largest drop between 1948 and 1949 occurred in turkeys with the 1949 cash receipts 86 per cent of the 1948 income. The income figure from the sale of ducks, geese and guineas was not available for 1947, 1948, and 1949 at the time of publication of this circular.

In table 12 an estimate is made of the seasonal average price and price index of the four main poultry and poultry products in Oregon. Decreases will be noted in each instance between 1948 and 1949. By referring to prior data in Extension Bulletin 678, it can be seen that until 1949 there had been a steady increase in the seasonal average price of each of these products. The greatest decrease between 1948 and 1949 was noted in the seasonal average price of turkeys which dropped 12.8 cents per pound or 29 per cent but was 183 per cent of the 1935-1939 average. In comparing the 1949 average price with the 1935-1939 index, it can be seen that the greatest increase was in chicken eggs followed by live chickens.

From information shown in table 13, it will be noted that there were more chicken eggs produced, more commercial broilers produced, and more turkeys raised in Oregon in 1949 than in 1948, but there were less chickens on hand January 1. Number of chickens on hand January 1, 1949 was down slightly from the previous year and was 92 per cent of the 1945-1949 average as shown in the table. Commercial broiler production in 1949 was 130 per cent of the 1948 production and 126 per cent of the 1945-1949 average. There were 8 per cent more turkeys raised in the state in 1949 as compared to 1948 but 17 per cent less than the 1945-1949 average.

Total hens and pullets on farms in Oregon January 1, 1949 was estimated at 2,997,000, of which 55 per cent were pullets and 45 per cent hens as shown in table 14. The decrease in hens and pullets on hand January 1, 1949 was about 5 per cent from the estimate of January 1, 1948. The total number of hens and pullets kept on farms during 1949 was up 1 per cent from the number kept during 1948. A substantial increase was noted in the rate of lay per hen between 1948 and 1949.

Table 5. Turkey Eggs and Poults: Estimate of Numbers Sold, Average Farm Price and Cash Receipts from Farm Marketings, by Counties, Oregon, 1948^{p 1/}

1949p	1,342,000	1,655,000	2,997,000	2,555,000 <u>4/</u>	182

* Compiled from data published by the U. S. Department of Agriculture, Bureau of Agricultural Economics. Data prior to 1947 may be found in table 4, Extension Bulletin 678, published September 1947.

p Preliminary

1/ Of laying age.

2/ Average number of layers in farm flocks during year.

3/ Number of eggs produced during the year divided by number of hens and pullets of laying age on hand during the year.

4/ Calculated from number of eggs produced and average rate of lay.
