# Oregon's Grain and Hay Crops

## 1925-1952

B. W. Coyle<sup>1</sup>

*Extension Agricultural Economist*

**T**HIS BULLETIN makes readily available, by use of tables and charts, the basic statistics on Oregon's grain and hay crops for the period 1925-1952. It brings together state data released by the Bureau of Agricultural Economics, U. S. Department of Agriculture, in various reports and includes supplemental county data not previously published.

Grain and hay are the most important crops grown in Oregon in terms of both acres and value of sales.

Wheat is the most important cash crop. Hay ranks first in acreage and in value for feeding livestock.

Practically all counties in the state raise some grain and hay. Umatilla leads in grain, while Malheur leads in hay marketings.

Data on the main grain crops are contained in Tables 1 to 17. Tables 18 to 30 cover the main hay crops.

## Oregon's Grain Crops

### All wheat

As this bulletin is written, the largest wheat crop in Oregon's history is starting to pour from combines throughout the state. Although the indicated 1952 acreage was not the highest in the 25-year period, good yields account for the largest estimated farm production on record for the state. (Table 1)

The yield of wheat in Oregon has been relatively high in recent years, being estimated at 21.4 bushels in 1949, 24.9 bushels in 1950, 27.7 bushels in 1951, and indicated 27.9 bushels in 1952.

<sup>1</sup>This bulletin was prepared for publication by B. W. Coyle, extension agricultural economist, under the direction of M. D. Thomas, extension agricultural economist, Oregon State College. It supersedes Extension Bulletin 692, published in August, 1948.

State data in this bulletin are based on records kept by Elvera Horrell, extension agricultural economist, of figures released from time to time by N. I. Nielsen, agricultural statistician in charge, Bureau of Agricultural Economics, U. S. Department of Agriculture.

County data were prepared from information supplied by county extension agents, growers, dealers, warehousemen, feed manufacturers, and other informed persons.

The author wishes to express his deep appreciation to all who supplied the necessary basic information.

With government price supports and fairly good export prospects for the coming season, all indications are both for high prices and for high cash receipts from farm marketings. The 1951 seasonal average price of \$2.16 per bushel was 15 per cent higher than the 1945-1949 seasonal average price of \$1.88.

Over 90 per cent of Oregon's 1951 wheat crop was harvested east of the Cascade Mountains. Table 2 shows that in eastern Oregon, the Columbia Basin counties, comprising District 4, had approximately 73 per cent of the wheat acreage, 76 per cent of the production, and 80 per cent of the value of sales for that year.

Umatilla, the leading wheat county in Oregon, had 27 per cent of the total acreage, 30 per cent of the production, and 32 per cent of the value of sales in 1951. Other major wheat counties were Morrow, Sherman, Gilliam, Wasco, and Union. (Table 3)

# Wheat Production, By Counties, Oregon, 1951

### Oats for grain

The harvested acreage of oats for grain as indicated in 1952 was down 12 per cent from the 1945-49 average but the total farm production was up slightly because of better yields. (Table 4) From 1943 to 1951 the value of sales have shown a steady increase due to the increased seasonal average price.

Over three-fourths of the oats for grain are grown in the Willamette Valley counties. (Tables 6 and 7) Marion led all counties in harvested acres and in value of sales in 1951. Klamath was the leading oat county in eastern Oregon.

Much of Oregon's oats are grown with other crops, as shown in Table 5. Approximately 71 per cent of the oats in 1951 were grown alone or with other grains while 29 per cent were grown with peas or vetch.

1952 <sup>3</sup> .....	299,000	9,120,000		

<sup>1</sup>Compiled from data published by the U. S. Department of Agriculture, Bureau of Agricultural Economics.

<sup>2</sup>For the years 1944 to 1952 the full acreage of the oats grown with peas or vetch is included in the total oat acreage with one-half of the average yield applied to this interplanted acreage; while for the years prior to 1944, one-half of the acreage of oats grown with peas or vetch is included in the total oat acreage with the full yield applied to this half acreage. The production and value figures are comparable for the entire series.

<sup>3</sup>Indicated July 1, 1952.

### Barley for grain

The harvested acreage and production of barley in the state has shown a fairly substantial gain from 1935 to 1952. (Table 8) With the rising seasonal average price, value of sales has also increased greatly. The indicated 1952 production was 229 per cent above the 1935 crop.

The leading barley county in 1951 was Klamath in District 6. That county had nearly 2,000,000 bushels or 16 per cent of the state's harvested acreage, 18 per cent of the total production, and 21 per cent of the value of sales. (Table 9)

The Willamette Valley, District 1, led all districts in barley harvested and cash receipts. County estimates from 1947 to 1951 show that barley acreage was fairly evenly divided between eastern and western Oregon. (Table 10)

# Barley Production, By Counties, Oregon, 1951

### Rye for grain

Rye for grain is a comparatively minor crop in Oregon in terms of both acreage and production. This crop has had its ups and downs in the 1925-1952 period. Greatest acreage and production occurred in 1940 and 1941. The low for both acreage and production was in 1925. The indicated figure of 18,000 acres in 1952 is 64 per cent above the low of 11,000 acres harvested in 1925. In 1951 the south central counties, District 6, had 77 per cent of the harvested rye acreage, 71 per cent of the total production, and 83 per cent of the value of sales. Klamath County had half of the state acreage of rye that year. (Tables 12 and 13)

### Field corn

Oregon's acreage and production of field corn has shown a steady decline since 1941. (Table 14 and chart) The indicated 27,000 acres in 1952 was less than half the 1925 acreage. Although the seasonal average price has risen since 1941, value of sales has not kept pace, mainly because more corn was fed on farms where grown and less was sold.

Approximately two-thirds of the field corn has been grown in the Willamette Valley. (Tables 15 and 16) Marion has been the leading corn county in the state. Malheur is the leading corn county in eastern Oregon. Much of the crop was kept on the farm where it was produced.

### Corn Production, By Counties, Oregon, 1951

### Five principal grain crops

A summary combining estimates of the individual grains for 1951 and 1945-1949 yearly averages shows both acres and value of sales. (Table 17) Umatilla is the leading grain county. Increases in value of sales over the 1945-1949 average occurred in each district of the state in 1951. The largest increase (40 per cent) was in District 4.

## Oregon's Hay Crops

### All hay

Acreage and production of all hay in Oregon for 1925-1952 has been quite constant. Seasonal average price and value of sales have shown an upward trend in recent years. (Table 18) While the indicated 1952 acreage of 1,008,000 is 14 per cent below the 1925 acreage of 1,176,000, the 1952 production is only 2 per cent below the 1925 production. A summary comparing all hay in 1951 with the 1945-1949 average shows that total hay acreage was down 6 per cent but value of sales rose 1 per cent. (Table 19) Approximately 69 per cent of all hay harvested in the state in 1951 was in eastern Oregon. The south central counties, District 6, with large areas of grass and wild hay, harvested the most hay in 1951. Prices received in 1951 were the highest in recent years.

# Total Hay Production, By Counties, Oregon, 1951

### Alfalfa hay

Alfalfa hay harvested in the state in 1951 comprised only about 22 per cent of the total hay acreage but the value of sales made up almost three-fourths of the total cash receipts from hay crops. (Tables 21 and 22) Alfalfa hay was grown in all but one of the counties of the state. Malheur County had the largest acreage in 1951. Other important alfalfa hay counties were Klamath, Umatilla, Union, and Deschutes. Eastern Oregon had 86 per cent of the total acreage in 1951.

p Preliminary.

### Clover hay

These estimates include some clover and grass mixtures but they represent primarily hay that is predominately clover. (Tables 23 and 24) The state acreage of this hay held reasonably steady during the 5-year period 1947-1951. Baker County in eastern Oregon had the largest acreage in 1951. Next in order were Washington, Grant, and Clackamas Counties.

p Preliminary.

### Vetch and pea hay

The acreage of vetch or pea hay in the state dropped from 135,000 in 1947 to 60,000 in 1951. (Tables 25 and 26) This decrease occurred mainly in the Willamette Valley, District 1, which was the main vetch hay area. In 1951, this district received 85 per cent of the total cash receipts from farm marketings of vetch hay. Prices changed from \$23 per ton, baled, at the first of the marketing season, to around \$50 per ton near the end.

<sup>p</sup> Preliminary.<sup>1</sup> County and state estimates prepared by Oregon State College Extension Service.

### Grain hay

The small grains cut for hay are principally wheat, oats, and rye. (Tables 27 and 28) The acreage of grain hay was well distributed over the state, main counties being Grant, Klamath, Crook, and Umatilla.

Grain Hay Production, By Counties, Oregon, 1951

### Other hay

Other hay includes wild hay which is prairie, range, or marsh grass, crested wheatgrass, orchard grass, June grass, sweetclover, millet, Sudan grass, old meadows, etc. (Tables 29 and 30)

The principal acreage of this hay was in eastern Oregon. In 1951, 56 per cent of the harvested acreage was in District 6.

Total value of sales was small because most of this hay was fed to livestock on the farm where it was produced.

p Preliminary.

## Explanation of Terms

(Unless otherwise noted)

ESTIMATES are expressions of judgment regarding what is true at any given time based on incomplete data, past relationships, calculations, appraisement, and general knowledge of the subject under consideration; they are published subject to revision. Tables of data marked "preliminary" are especially subject to further consideration and revision.

FARM PRODUCTION AND FARM NUMBERS for the state as a whole are estimates published by the Bureau of Agricultural Economics, U. S. Department of Agriculture. County numbers are estimates obtained from county agents and other informed persons, and adjusted to state totals.

SEASONAL AVERAGE PRICES are the average of prices received by farmers at usual marketing points for quantities sold during the crop season.

VALUE OF SALES in this bulletin is intended to represent cash receipts to farmers from products sold and are based on the crop marketing season.

## Type of Farming Districts

Much of the data for the state have been broken down into the following districts:

- District 1. *Willamette Valley counties*: Benton, Clackamas, Lane, Linn, Marion, Multnomah, Polk, Washington, and Yamhill.
- District 2. *Coast and Lower Columbia counties*: Clatsop, Columbia, Coos, Curry, Lincoln, and Tillamook.
- District 3. *Southern Oregon counties*: Douglas, Jackson, and Josephine.
- District 4. *Columbia Basin counties*: Gilliam, Hood River, Morrow, Umatilla, Sherman, Wasco, and Wheeler.
- District 5. *Snake River Basin counties*: Baker, Malheur, Union, and Wallowa.
- District 6. *South Central counties*: Crook, Deschutes, Grant, Harney, Jefferson, Klamath, and Lake.

## Oregon Agricultural Statistical Bulletins

At the present time, bulletins containing Oregon agricultural statistics include the following:

- Extension Bulletin 730, Oregon's Farm Forest Products, 1925-1951
- Extension Bulletin 729, Oregon's Grain and Hay Crops, 1925-1952
- Extension Bulletin 724, Oregon's Specialty Horticultural Crops, 1936-1949
- Extension Bulletin 722, Oregon's Long-Term Trends in Agriculture (1925-1929 to 1945-1949)
- Extension Bulletin 718, Oregon's Meat Animals and Wool, 1925-1951
- Extension Bulletin 710, Oregon's Small Fruit Crops, 1936-1949
- Extension Bulletin 701, Oregon's Potatoes and Truck Crops, 1870-1949
- Extension Bulletin 700, Oregon's Tree Fruit and Nut Crops, 1910-1949
- Extension Bulletin 696, Oregon's Specialty Field and Drug Crops, 1915-1948
- Extension Bulletin 694, Oregon's Seed Crops, 1936-1947
- Extension Bulletin 680, Oregon's Dairy Industry, 1867-1947
- Extension Circular 536, supplementing Extension Bulletin 680
- Extension Bulletin 679, Oregon's Specialty Animal Industries, 1936-1946
- Extension Bulletin 678, Oregon's Farm-Raised Poultry Products, 1909-1947
- Extension Circular 537, supplementing Extension Bulletin 678
- Extension Bulletin 660, Oregon's Farm Price Data, 1909-1944
- Extension Bulletin 641, Oregon's Farm Products for Market, 1936-1940

Other statistical bulletins are in the process of preparation.
