Extension Bulletin 718

May 1951

Explanation of Terms

(Unless otherwise noted)

ESTIMATES are expressions of judgment regarding what is true at any given time based on incomplete data, past relationships, calculations, appraisal, and general knowledge of the subject under consideration, and are published subject to revision. Tables on data marked "preliminary" are especially subject to further consideration and revision.

LIVESTOCK numbers represent animals on farms January 1 in the year indicated.

FARM PRODUCTION is the live weight produced on farms and ranches during the calendar year.

COUNTY NUMBERS are estimates based on information obtained from county agricultural agents and other informed persons, and adjusted to the state total.

SEASONAL AVERAGE PRICES are the average of prices received by farmers at usual marketing points for quantities sold.

CASH RECEIPTS FROM FARM MARKETINGS in this bulletin are intended to represent returns to farmers from products sold during a calendar year.

Type of Farming Districts

Much of the data for the state has been broken down into the following districts.

District 1—*Willamette Valley counties*: Benton, Clackamas, Lane, Linn, Marion, Multnomah, Polk, Washington, and Yamhill.

District 2—*Coast and Lower Columbia counties*: Clatsop, Columbia, Coos, Curry, Lincoln, and Tillamook.

District 3—*Southern Oregon counties*: Douglas, Jackson, and Josephine.

District 4—*Columbia Basin counties*: Gilliam, Hood River, Morrow, Sherman, Umatilla, Wasco, and Wheeler.

District 5—*Snake River Basin counties*: Baker, Malheur, Union, and Wallowa.

District 6—*South Central counties*: Crook, Deschutes, Grant, Harney, Jefferson, Klamath, and Lake.

Oregon's Meat Animals and Wool¹

1925-1951

FARM production of meat animals in Oregon in 1949 amounted to almost 401 million pounds liveweight. This was 9 per cent more than the 1948 production of approximately 369 million pounds. Cash receipts from farm marketings of meat animals and wool amounted to nearly 82 million dollars in 1949, 3 per cent above the 1948 receipts of close to 80 million dollars. Refer to Table 1.

More money is received by farmers in Oregon from meat animals and wool than from any of the other 12 groups of farm commodities for which Oregon statistical yearbooks are prepared. Total cash receipts from meat animals and wool increased steadily from 1940 until 1948 when there was a slight drop, but 1949 again showed an upward trend which has continued into 1951.

^p Preliminary.

* Compiled from data published by the U. S. Department of Agriculture, Bureau of Agricultural Economics.

Income from cattle and calves accounted for almost three-fourths of the total received from meat animals and wool. The division of cash receipts in 1949 was as follows: cattle and calves,

¹This bulletin is to supersede Extension Bulletin 684 and Extension Circular 527, earlier reports on the same subject. This report was prepared for publication by B. W. Coyle, extension agricultural economist, statistics, under the direction of L. R. Breithaupt and M. D. Thomas, extension agricultural economists, Oregon State College.

State data in this bulletin are based on various reports from the Bureau of Agricultural Economics, U. S. Department of Agriculture, except as otherwise noted. County data were prepared from information furnished by county extension agents, livestock men, and other informed persons.

72 per cent; hogs, 16 per cent; and sheep, lambs, and wool, 12 per cent.

The south central counties, District 6, led all other sections of the state in 1949 in both farm production and cash receipts from farm marketings of meat animals. Leading county was Malheur with an estimated total meat animal production of almost 40 million pounds and cash receipts of close to 8 million dollars. Refer to Table 2.

Of the total meat animal production of 400,964,000 pounds in 1949, cattle and calves accounted for 74 per cent, sheep and lambs 17 per cent, and hogs 9 per cent. In that year the highest production from cattle and calves occurred in District 6, the south central counties, which had an estimated 30 per cent of the total. The Willamette Valley, District 1, was the leading section in sheep, lambs, and hogs.

In 1949 Malheur County led in cattle and calf production, Douglas in sheep and lamb production, and Willowa in hog production.

Wool production in Oregon has been on a steady decline since the year 1934 with the exception of 1941 when there was only a slight increase from the year before, and in 1950 which showed a 3 per cent increase over 1949. The 1950 clip was only one-half of the 1939-1948 average. Cash receipts from farm marketings of wool

* County estimates prepared by Oregon State College Extension Service and adjusted to state totals published by the U. S. Department of Agriculture, Bureau of Agricultural Economics.
^p Preliminary.

for 1950 showed an increase of almost 30 per cent over 1949 due mainly to the 12 cents per pound increase in the price paid for wool in 1950 as compared to 1949. Cash receipts of \$2,395,000 for 1949, however, were the third lowest of the 50 years of record, exceeding only the years 1921 and 1932.

Total production and cash receipts from farm marketings of wool by counties in Oregon are shown in Table 3. The leading section in both production and cash receipts was District 1, the Willamette Valley. In 1949, this section accounted for almost 29 per cent of the total state production. Although the production dropped in Douglas County between 1948 and 1949, this county still led other counties of the state in total wool production.

All cattle

The preliminary estimated number of all cattle on hand January 1, 1951 in Oregon was 1,118,000 head of which 31 per cent were beef cows 2 years old and over, 21 per cent milk cows 2 years old and over, and 48 per cent all other cattle less than 2 years old. Refer to Table 4.

The total number of all cattle on farms in Oregon on January 1, 1951 was estimated to be about 1 per cent greater than on January 1, 1950. This increase was due largely to a 6 per cent increase in beef cows, as milk cows showed a decrease of over 2 per cent in this period. In Table 8 a breakdown is shown of cattle numbers on farms by counties in Oregon. Largest concentration of all cattle on January 1, 1950 was in District 6, the south central counties which

† Estimate by Oregon State College Extension Service.

Beef Cows on Farms, Oregon, January 1, 1950

had 30 per cent of the state total. Next in order was District 5, the Snake River Basin counties, 24 per cent, followed by District 1, the Willamette Valley counties, 18 per cent, District 4, the Columbia Basin counties, 13 per cent, District 2, the Coast and Lower Columbia counties, 8 per cent, and District 3, the southern Oregon counties, 7 per cent. Malheur County in District 5 recorded the most cattle on hand January 1, 1950. Next in order was Harney, Klamath, Lake, Grant, and Umatilla. As shown in Table 11, there were 10 per cent more cattle slaughtered in 1949 than in 1948 but 7 per cent less slaughtered in 1950 as compared to 1949. Calf slaughter increased by 30 per cent in 1949 compared with 1948, while 1950 calf slaughter was down by 2 per cent from 1949, as shown in Table 12.

Beef cows

As shown in Tables 4 and 9, beef cows have been on the increase in Oregon during the last few years and the January 1, 1951 estimate of 352,000 head is a record high in the state. This is an increase of 20,000 head over the previous high of 332,000 head on January 1,

1950. About 85 per cent of the beef cows are in eastern Oregon. There has, however, been a decided increase in beef cows in western Oregon in recent years. On January 1, 1950 there were 40 per cent more beef cows on farms in western Oregon than there were on the same day three years previous. Refer to Table 9. Greatest number of beef cows on farms January 1, 1950, were in District 6, the south central counties. The combined total of all beef cows in these counties accounted for almost half of the state total in 1950.

Individually, however, Malheur county led other counties of the state with almost 13 per cent of the total. Harney and Lake counties were only slightly under Malheur county in beef cows on hand January 1, 1950.

Sheep

Sheep numbers have been decreasing steadily since 1931 when there were an estimated 2,679,000 on farms January 1. By comparison with January 1, 1951 there were less than one-fourth as many sheep in the state as there were in 1931.

The trend by individual counties is shown in Table 13. Although sheep numbers have been declining in Douglas County, this county still leads other counties of the state with almost 13 per cent of the total on January 1, 1950. In this same year, Linn County in District

1 and Malheur County in District 5 were second, followed by Umatilla, Marion, Lane, and Morrow.

An interesting change has occurred in the past few years in the distribution of sheep in the state. In 1940 eastern Oregon had three-

p Preliminary.

fourths of the total sheep in the state, but in 1949 over one-half of the sheep were located in western Oregon.

Sheep and lamb slaughter for the three-year period 1948-1950 showed a gradual decline with the 1950 slaughter being 6 per cent less than the 1948 slaughter. Refer to Table 16.

Numbers of ewes, 1 year old or over, on farms in Oregon, by counties, January 1, 1947 to 1950 are shown in Table 14. The January 1, 1950 estimate of 572,000 ewes was the lowest on record although the preliminary estimate for 1951 shows an even lesser amount. Refer to Table 5.

Hogs

Hogs in Oregon showed a 15 per cent decrease January 1, 1951 as compared to January 1, 1950. See Table 6. Present holdings of 141,000 head are 24 per cent below the 1945-1949 average and the smallest January 1 number since 1871. Hog population by counties is shown in Table 18. The largest number of hogs are located in District 1, the Willamette Valley counties. In 1950 this section accounted for 38 per cent of all hogs in the state. Willowa County in District 5 recorded the most hogs on hand January 1, 1950. Union, Marion, and Linn counties each reported hog numbers in excess of 11,000. Table 19 shows how brood sows are distributed by counties in the state in the 4-year period 1947-1950. On January 1, 1950

brood sows numbers were rather evenly divided between eastern and western Oregon. Western Oregon recorded 45 per cent and eastern Oregon 55 per cent.

Hog slaughter increased during the period shown in Table 17. Twelve per cent more hogs were slaughtered in 1949 than in 1948 and 11 per cent more were slaughtered in 1950 than in 1949.

p Preliminary.

Prices

The seasonal average prices of meat animals and wool together with index numbers using the 1935-1939 seasonal average prices as base are shown in Table 7. In the 26-year period shown in the table, prices received by Oregon farmers from sale of meat animals and wool reached a high level in 1950 with the exception of hogs when the high point was 1947. The lowest level in prices during the period shown was as follows: beef cattle, 1933 and 1934, at 60 per cent of the 1935-1939 base; veal calves, 1933 and 1934, at 65 per cent of 1935-1939; and sheep, lambs, wool, and hogs, in 1932, at 62, 54, 38, and 46 per cent, respectively.
