Revised June 1971

DISCARD

Cooperative
Extension Service
Oregon State University
Corvallis

THESE recommendations are made by specialists in horticulture, botany, plant pathology, food technology, and home economics at Oregon State University in cooperation with seed companies. These recommendations are based on research, practical experience, and observation. It is a good idea to try new varieties on a small scale first. Cautious, reasonable testing of new varieties may pay big dividends. Very new varieties, while distinctly promising, may only be available in small packets on the year of release.

Most of these varieties are recommended for all of Oregon. Exceptions have been marked.

All varieties grown commercially are suitable for home gardeners, being well adapted to Oregon conditions. Home gardeners who are unable to find the recommended varieties at their seed store should shop from several catalogs.

Varities in *italics* are suitable for processing.
