SUMMARY

1. The purpose of this study is to provide statistical evidence on trends in the expenditure of public funds in the State of Oregon during the past 25 years, 1910 to 1934, by the more important spending units and major functions as measured by levies imposed upon the taxable property in the state.

With the probable exception of a few generalizations, the volume and nature of the data presented preclude any satisfactory summarization of the same.

2. One of the most outstanding observable facts in the data presented is the general upward trend in rural levies and taxes from 1910 to approximately 1928, with a recession during recent depression years, and mounting urban levies and taxes from 1910 until well into the depression years.

The coast counties are prominent among those counties indicating the greatest increase in millage levies.

Revenues derived from independent sources, especially from income and excise taxes, account for the decline in levies for state purposes during recent years.

The recent decline in road levies, both rural and urban, is due to the increasingly larger part played by the state in the construction and maintenance of roads and highways.

3. Total urban general property taxes levied for all purposes in the state rose from \$9,039,954 on the 1910 assessment rolls to \$28,861,524 on the 1930 rolls, with a subsequent decline to \$24,022,513 on the 1934 rolls, or a drop of 17 per cent from the 1930 peak.

In terms of the 1926 all-commodity index dollar, urban taxes rose from \$12,840,843 on the 1910 rolls to \$39,324,240 on the 1932 rolls, followed by a drop to \$32,072,781 on the 1934 rolls. The peak of urban taxes in terms of actual purchasing power, therefore, came two years later than is indicated by the actual taxes levied.

4. The total rural general property taxes levied rose from \$6,390,857 on the 1910 assessment rolls to \$20,345,905 on the 1928 rolls and thereafter declined to \$14,731,571 on the 1934 rolls, a decrease of 28 per cent from the 1928 peak.

In terms of the 1926 all-commodity index dollar, rural taxes rose from \$9,077,921 on the 1910 rolls to \$24,283,200 on the 1932 rolls, with a subsequent drop to \$19,668,319 on the 1934 rolls. The peak of rural taxes in terms of actual purchasing power, therefore, came four years later than is indicated by actual taxes levied. The trough of the depression as reached, therefore, before there was any lessening in actual tax load on either rural or urban property. This is consistent with the common experience that tax changes usually lag several years behind economic changes.

5. Tax data for the last three census years indicate that the total per capita rural taxes levied were highest in the 1920 census year, reaching a weighted per capita average of \$93.65 in the coast counties, \$76.18 in Eastern Oregon counties, \$65.37 in Southern Oregon, and \$45.12 in Willamette Valley counties. Total per capita taxes in corresponding groups of counties in the 1930 census years were \$85.66, \$71.20, \$49.45, and \$39.64 respectively. The only important rural taxes that had a higher per capita average in 1930 than in 1920 were public school taxes.

SUMMARY—CONTINUED

Total per capita urban taxes, however, as well as urban school and special city taxes indicate a general rise throughout the period in all divisions of the state. The weighted per capita average for all purposes in the 1930 census year aggregated \$61.97 in the coast counties, \$57.49 in Multnomah County, \$41.39 in Southern Oregon, \$36.77 in the Willamette Valley, exclusive of Multnomah County, and \$36.40 in Eastern Oregon counties.

6. Of the four rural taxes of major importance—state, county, school, and road taxes—the school taxes indicate the greatest percentage increase during the 25-year period over the 1910 to 1913 average tax.

Among the five most important urban taxes, school, and special city taxes contend with each other during the 25-year period for first place in percentage rise over the 1910 to 1913 average taxes. In the Eastern Oregon, Southern Oregon, and the Willamette Valley groups of counties the percentage rise in school taxes exceeds the rise in city taxes, whereas in the coast group and in Multnomah County the percentage increase in special city taxes exceeds the school tax increase.

7. A percentage distribution of rural levies indicates that levies for state purposes have averaged from 8.6 per cent of total levies in coast counties to 13.7 per cent of total levies in Eastern Oregon counties during the 25-year period under investigation. During this period county levies have approximated 20 per cent of total levies and road levies 25 per cent of total. Of all the rural property levies, those for public school purposes are the most important, having averaged 30.2 per cent of total levies in coast counties, 38.8 per cent in Southern Oregon counties, 40.2 per cent in Willamette Valley counties, and 42.7 per cent of total levies in Eastern Oregon counties.

8. A percentage distribution of urban levies shows that levies for state purposes have averaged from 5.10 per cent of total levies in the coast counties to 9.65 per cent in Multnomah County during the 1910 to 1934 period. County levies during this same period have averaged from 9.02 per cent in Multnomah County to 11.49 per cent of total urban levies in the remaining Willamette Valley counties, with levies for roads averaging from 5.12 per cent of total levies in Multnomah County to 12.21 per cent in the coast counties. The two most important levies, the special city and school levies, have each averaged in excess of one-third of total urban levies during this 25-year period.

9. The data on taxes and tax levies in Oregon during the more recent years are concrete evidence of the well-nigh impossible task of rapid retrenchment in public expenditures and tax levies during periods of economic depression. Many public expenditures are of a fixed nature. Commitments extending over long periods of time have been entered into. Salaries, fees, and levies are frequently fixed by statute if not found in the organic law of the state. The people also are reluctant to surrender customary public services in order to reduce taxes or curtail indebtedness.

Furthermore, a decrease in public outlays not only may not effect a decrease in tax levies but may be accompanied by an actual increase in levies due to a shrinkage in taxable values, but more particularly to an increase in tax delinquency.

Public Expenditures in Oregon

By Spending Units and Major Functions as Measured by Tax Levies Imposed Upon General Property

By
W. H. DREESSEN

I. INTRODUCTION

THIS study is an analysis of public expenditures in the State of Oregon by spending units and major functions as measured by tax levies imposed upon all taxable general property.¹

In Station Bulletin 257 are presented the trends in Oregon tax levies by counties for the period 1910 to 1928.² The levies are calculated for both rural and urban properties upon the assessed, the equalized, and the full cash value bases and for a limited number of years upon the sale value basis.

In the present study both the rural and the urban levies for all counties as presented in Station Bulletin 257 are analyzed according to spending units and functions for which expended.³ The data have been extended to cover the period 1910 to 1934, inclusive. The rural levies are segregated into levies for the state, county, school, roads, debt and interest, and miscellaneous purposes. The urban levies have the additional classification of special city levies. Irrigation and drainage levies have been excluded in all cases as they are not outlays for public purposes.

Grouping of counties. Although the analysis of the tax data for the individual counties constitutes the major part and principal purpose of this survey, for comparative purposes the state has been divided along county lines into four sections, each section being treated as a unit. The four sections include the coast counties, the Willamette Valley counties, Southern Oregon counties, and Eastern Oregon counties. Hood River County has been classified with Eastern Oregon counties and Columbia County has been classified with Willamette Valley counties. In the analysis of urban levies, Multnomah County has been treated independently of the other Willamette Valley counties.

Owing to the great diversity in climatic conditions, contour, soil, and coverage in the different areas in Oregon, it seems almost impossible to

¹At the outset it might be urged that an analysis of public expenditures should be based upon actual expenditure data rather than upon tax data, especially at a time when there is so much tax delinquency. This contention carries considerable weight, but from the standpoint of the man who pays his taxes it is the levies that count. General tax delinquency during recent years undoubtedly has been indirectly responsible for reduced expenditures, but it has also kept the levies high for the man who does not let his taxes become delinquent.

The State Tax Commission reported in May, 1934, that as of that date there were delinquent 14.23 per cent of the 1930 roll taxes, 24.47 per cent of the 1931 roll taxes, and 34.05 per cent of the taxes levied upon the 1932 rolls.

³Curry County has no incorporated cities.

speak of any economic or physical condition as typical of any large area in the state. The counties in each of the above divisions, however, have enough in common to warrant the division of the state into the four sections.

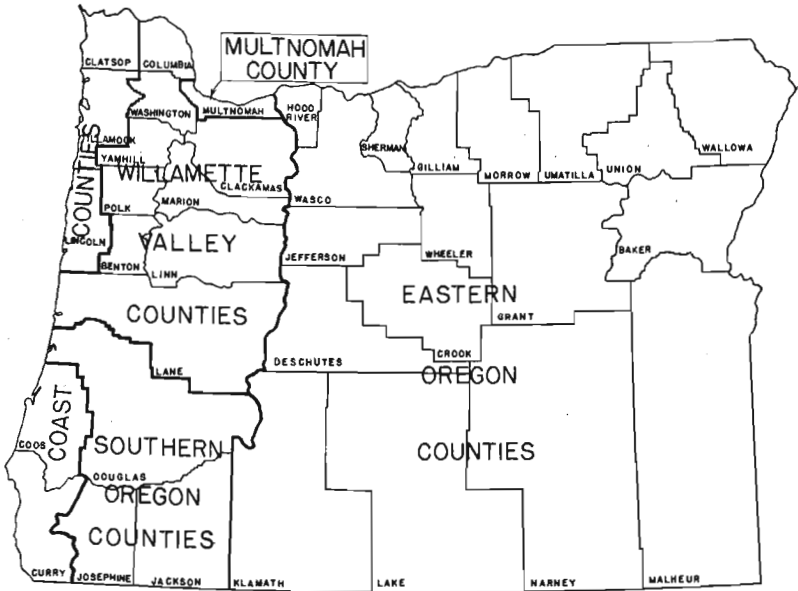

Fig. 1. STATE of OREGON

Bases of tax levies.¹ The State Tax Commission recognizes three bases of valuation of taxable property in the state—assessed valuation, full cash value, and equalized valuation. Data on tax levies throw little light upon relative tax burdens and tax trends in the different taxing precincts unless it is clear what is meant by the basis upon which the levies are made. If this basis does not represent corresponding values from year to year within a given taxing precinct the annual data are not comparable. Again if the basis in one taxing jurisdiction represents something different from the basis as used in another jurisdiction the data on levies are not comparable.

The assessed valuation represents the value of taxable property as assessed and equalized by the county authorities together with that apportioned by the State Tax Commission. It constitutes the basis upon which the property holders' taxes are levied. This basis usually, although not always, bears a fairly constant ratio to full cash value within the same county over considerable periods of time and hence data on annual levies on this basis are valuable for comparative purposes within the given county. As between counties, however, the data serve no such purpose owing to the fact that ratios of assessed values to full cash values in the different counties vary so extremely.

¹Adapted in part from Station Bulletin 257.

The second basis given above is the so-called full cash value basis of all taxable property in the state as estimated by the State Tax Commission. The establishing of this basis is the preliminary step in the apportionment of the general state levies among the counties and in the equalization and apportionment among the counties of the property assessed by the State Tax Commission.

The third basis represents the so-called equalized values of all taxable property in the state as equalized among the several counties by the State Tax Commission. This basis is obtained by multiplying the total full cash value of all taxable property in each county by the ratio of the total assessed value to total full cash value of all taxable property in the state.¹

The data obtained by calculating the levies upon these valuations present a true picture of intercounty tax levies. This valuation also represents the actual basis upon which the general millage levies such as the elementary school levy and the millages for the institutions of higher learning are calculated. Although the ratios of equalized values to full cash values have shown a tendency to decrease over a period of years, equalized valuation serves as a fair basis for the indication of tax trends. All the calculations in this survey are made upon the equalized valuation basis.

In all cases the years indicated in this study are assessment roll years unless otherwise specified.

Segregation of rural and urban levies. A complete segregation of rural and urban tax levies and consequently rural and urban taxes by functions, state and local, is presented in this survey.

General levies for state and county purposes were readily calculated upon the equalized valuations of rural and urban properties within the respective counties. Numerous difficulties, however, were encountered in the segregation of certain other levies into rural and urban. High school tuition levies, although generally rural levies, in many instances fall upon the valuations within incorporated places which do not maintain independent high schools or are not included within union high school districts.

¹The following table illustrates the meaning of the three different bases upon which tax levies may be calculated.

COUNTY	BASE I ASSESSED VALUE	BASE II FULL CASH VALUE	BASE III EQUALIZED VALUE	COUNTY RATIO
A	\$10,000,000	\$15,000,000	\$ 8,888,888.89	+ .67
B	12,000,000	24,000,000	14,222,222.22	+ .50
C	8,000,000	20,000,000	11,851,851.86	+ .40
D	9,000,000	12,000,000	7,111,111.11	+ .75
E	10,000,000	12,000,000	7,111,111.11	+ .83
F	15,000,000	25,000,000	14,814,814.81	+ .60
	\$64,000,000	\$108,000,000	\$64,000,000.00	+ .5926

Figures under BASE I represent the taxable values as assessed and equalized by county authorities including the taxable property equalized and apportioned by the State Tax Commission. Figures under BASE II represent the full cash value of all taxable property in the respective counties as estimated by the State Tax Commission. Figures under BASE III represent the equalized values for the respective counties. The equalized values for the respective counties are obtained as follows: The sum total of the figures under BASE II are divided into the sum total of the figures under BASE I. The percentage obtained, .5926, is next multiplied by the figures under BASE II for the respective counties. The county ratios are obtained by dividing the figures under BASE I by the figures under BASE II for the corresponding counties.

A perusal of any biennial report of the State Tax Commission of the State of Oregon will more fully explain these different bases of valuation. For example, see pp. 22 to 25, Twelfth Report.

Urban district school levies were computed upon the equalized valuations of only such portions of the school districts as were contained within the corporate limits of the city. The levies upon the remaining portions of the districts were classified as rural.

A similar course of procedure was necessary in the segregation of rural and urban tax levies for port, diking, special road districts, and for other purposes.

The difficulties of segregating city and rural taxes were further increased by the fact that the conditions in the various counties have not remained constant throughout the period under investigation.

Public school revenue laws. The laws governing the imposition of public school and road levies are both complex and subject to frequent changes. Of the two, the laws governing the school levies probably are the more complex, whereas the laws affecting the road levies have been subject to the most frequent changes.

The major portion of the revenue for the maintenance and operation of the public schools in the state is obtained through district, county-wide, and state-wide levies upon the taxable property within the respective jurisdictions.

In districts of the second and third class, district meetings, legally called, have the power to levy taxes upon the assessable property in their districts for the support and benefit of their schools. The calls for such district meetings must contain itemized budgets showing contemplated expenditures. Any levy made in third class districts may be reviewed and lowered by the district boundary board of the county.¹

In districts of the first class, other than those having more than 100,000 inhabitants, the question of levying a tax is submitted at an election called by the board of directors.²

In school districts with 20,000 or more children of school age, the annual school meeting has been abolished and the board of school directors is authorized to fix the tax to be levied for the support of the district.³ Any legal elector, however, at a meeting called for that purpose, shall be accorded a hearing on any item of such budget.⁴

In union high school districts the school board has the power to prepare the budget and levy a tax upon all the assessable property of the district.⁵

A board consisting of the county school superintendent, two county commissioners, the county judge, and the county treasurer exercise the power of levying taxes for the support and benefit of county high school districts.⁶

For the purpose of paying the tuition of high school pupils residing in any territory in any county not in a high school district, a special tax is levied by the county court of each county containing such territory upon the assessable property in such territory.⁷

⁷Laws 1915, c. 235, Sec. 1; O. L. Sec. 5324.

A county-wide levy upon all the assessable property of the several counties is made annually by the county courts for the purpose of creating a county school fund. Such levy must be adequate to produce at least \$10 per capita for each school census child.¹

A state-wide levy of two mills on the dollar upon all the taxable property within the State of Oregon for the support and maintenance of the public elementary schools of the state is provided for under a law of 1920. The fund is known as the elementary school fund and the whole amount raised by the 2 mill levy within any county is required to be credited to the state elementary school fund of such county without any deduction.²

In this survey there is included under the classification "School Levies" the aggregate of all the various levies on general property for public school purposes. Levies for the institutions of higher education, however, are included in the state levies.

Road and highway taxes. Road and highway legislation constitutes a considerable body of law in the state, but the taxation feature alone will receive attention in this study.

The county courts or commissioners' courts of the various counties have for many years had the authority to levy taxes not to exceed 10 mills upon all the taxable property of their respective counties for road building and road improvement purposes.³

Under the laws of 1903 and 1909, 50 per cent of the tax money thus collected was reapportioned by the several counties to their road districts, including districts composed of incorporated cities and towns in proportion to the taxable property of the road districts in the county. Under the laws of 1915, 1917, and 1919, 70 per cent of the tax money was thus distributed.⁴ But under later laws the apportioned amount was again reduced to 50 per cent of the tax money collected under these county road levies.⁵

The law of 1919 and subsequent laws made it obligatory upon county and commissioners' courts of all counties, whose population did not exceed 25,000 according to the census of 1910, to levy a tax of not less than 1 mill upon the taxable property of the county for road maintenance and construction purposes.

Subject to the approval of their respective county courts, the resident taxpayers of all road districts in the state have also for many years possessed the power of voting additional taxes not to exceed 10 mills on the dollar of all taxable property of the road district for road improvement purposes.⁶

ISSUE OF COUNTY ROAD BONDS: The constitution of the State of Oregon as originally adopted provided that no county should create debts which in the aggregate would exceed \$5,000, except to suppress insurrection or repel invasion.⁷ By a constitutional amendment approved by the people in 1910, the bonding of the county for the building of permanent roads was authorized without limitation.⁸ Two years later, however, by another

⁸Constitution of Oregon, Art. XI, Sec. 10; L. 1911, p. 11.

amendment, the bonded indebtedness of counties for road building purposes was limited to 2 per cent of the assessed valuation of the taxable property within the county.¹

Following the passage of this amendment, the state legislature in 1913 passed a law authorizing the county court upon petition of a designated number of voters in the county to call a special election for the purpose of voting upon bond issues for road building purposes.²

In 1920, the people of the state approved another constitutional amendment raising the limits of the counties' bonded indebtedness for roads to 6 per cent of the assessed valuation of the taxable property within the respective counties.³

STATE HIGHWAY COMMISSION: The first State Highway Commission, consisting of the Governor of the State, the Secretary of the State, and the State Treasurer, was provided for by a legislative enactment in 1913.⁴ This commission was instructed to appoint a State Highway Engineer.⁵ Pursuant to an Act of Congress, "An Act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," (39 U. S. Statutes at Large, page 355), the old ex-officio commission was supplanted by a Highway Commission consisting of three members appointed by the Governor, one from each of the congressional districts of the State.⁶

STATE ROAD FUND: The first state levy made against the assessable property within the counties for a general state road fund was made against the 1913 assessment rolls. The legislature of that year instructed the State Tax Commission to annually place a levy equal to one-fourth mill against all taxable property within the counties. The monies collected under this levy were placed in a "State Road Fund" held at the disposal of the State Highway Commission.⁷ The 1913 Act was replaced by a similar act in 1917.⁸ In 1921 the legislature passed a law diverting the monies collected under this act during the years 1921 and 1922 from the State Highway Fund to the general fund of the state.⁹ Four years later the one-fourth mill road levy law was repealed.¹⁰

STATE MARKET ROAD LEVY: An annual tax of 1 mill on the dollar on all taxable property in the state for market road purposes was provided for by an act of the 1919 legislature. The monies collected under this law became a part of the state highway fund but were ear-marked for apportionment among the several counties in such amounts that each county should receive an amount at least equal to its contribution to the market road fund except that no county should receive in excess of 10 per cent of the total amount raised. Preliminary to any county receiving an apportionment under this law, however, the county court of such county had to raise by a

uniform levy on all the taxable property of the county such a sum as would equal the amount apportioned to it from the "state market road appropriation."¹ The law was repealed by the 1931 legislature, the last levy having been made against the 1930 assessment rolls.² The only levies remaining, therefore, on general property for road building and improving purposes, are those made locally as county levies by county courts and those made by resident taxpayers of road districts with the approval of the county courts.

Sources of information. The principal sources of information utilized in this study are the annual summaries of assessment and taxation as issued by the county assessors and the Oregon Codes and session laws. Aggregate levies on equalized values of both rural and urban taxable properties for the years 1910 to 1928 were adopted from Station Bulletin 257, pages 13 and 21. In many instances information was obtained both in person and by correspondence from county and state offices.

The author expresses his appreciation of the generous response received from state and county officials and others in furnishing information requested. Special acknowledgement is due the members of the State Tax Commission, the county assessors, treasurers, and clerks, and Mr. C. C. Chapman, Editor of the "Oregon Voter." Special acknowledgment is also due Miss Mary Holthouse for her efficient and painstaking work in making the countless computations required for this study.

II. DISTRIBUTION OF RURAL LEVIES BY COUNTIES

The levies designated in the following tables as rural levies are the weighted levies on all rural taxable property including tillable, non-tillable, and timber lands as well as all public utility property outside of the corporate limits of the cities.

No attempt is made to offer explanation for the variations in trends of levies of the different counties.

Tax levies on equalized rural valuations by counties. Tables 1 to 72 inclusive contain two series of statistical compilations. In the one series of tables are found the weighted average levies in mills on equalized rural valuations for state, county, school, road, debt service, and miscellaneous purposes in mills by counties for the assessment years 1910 to 1934. In the other series of tables are found the tax levies on equalized rural valuations for the designated purposes in percentages of total weighted levies by counties for the 25-year period under investigation.

The tables are arranged by counties in alphabetical order. The table containing the levies in mills is followed immediately by the table of the corresponding county indicating the same levies in percentages of the total levies.

The tables containing the levies in mills show the trends in actual levies for the specified purposes for each of the 36 counties in the state and also admit of intercounty comparisons of these trends.¹

The second series of tables indicate the relative importance of levies and the trends or changes in the relative importance of these levies for the various functions for each of the counties. Intercounty comparisons may also be made, as the levies for all counties are calculated on the uniform equalized valuation basis.²

¹For an explanation of the effect of rising taxes upon land values see pp. 26 to 29, Station Bulletin 257.

²Perfect uniformity in the segregation of levies by spending units and functions has been difficult of attainment in many instances. Unusual and infrequent levies, usually placed in "miscellaneous," have further complicated the problem. The following instances are given by assessment years:

1911—The building fund of Harney County, the levy for the armory in Jackson County, and the expense for timber cruising in Crook County are classified as miscellaneous.

1912—The building fund in Washington County is classified as miscellaneous.

1913—Expense for armory in Lane County is placed in miscellaneous.

1914—Levy for court house in Klamath County is placed in miscellaneous.

1915—Levy for court house in Klamath County again placed in miscellaneous. Levies for port expenses for Multnomah, Clatsop, Tillamook, Lincoln, Coos, and Curry counties are classified as miscellaneous in all years.

Table 1. WEIGHTED AVERAGE TAX LEVIES IN MILLS ON EQUALIZED RURAL VALUATIONS FOR STATE, COUNTY, SCHOOL, ROAD, DEBT SERVICE, AND MISCELLANEOUS PURPOSES FOR THE ASSESSMENT YEARS 1910 TO 1934, INCLUSIVE.

Baker County							
Year	Total	State	County	School	Roads	Debt service	Miscellaneous
1910	13.30	1.64	4.77	4.44	2.45		
1911	12.79	3.44	3.17	3.64	2.54		
1912	11.79	1.24	4.03	4.37	2.15

¹By legislative enactment, special session 1933, taxes due the state by Tillamook County to the extent of \$31,392.70 were waived on account of uncollected taxes by the county on devastated timber areas. An additional credit of \$24,797.42 on state taxes was allowed Tillamook County at the special legislative session in 1935.

Special Session Laws, 1933, Chap. 18, p. 66.

Special Session Laws, 1935, Chap. 3, p. 9.

1934	100.00	11.21	18.16	56.35	13.41		.87

Increase of the 1932 to 1934 average levies over the 1910 to 1913 averages by counties. Figure 2 based upon Table 73 graphically presents the millage increase of the 1932 to 1934 average levies over the 1910 to 1913 average levies for both the rural and urban taxable properties by counties. The percentage increase in levies is similarly presented in Figure 3, based upon Table 74. The correlation between the increase in urban and rural levies measured either in mills or on the percentage basis is almost nil. The correlation between the rural percentage increase and rural millage increase is naturally high. With the exception of the Coos County percentage increase, the increase in millage levies of the coast counties is well above the average of the state increase.

Table 73. INCREASE OF THE 1932 TO 1934 AVERAGE MILLAGE LEVIES OVER THE 1910 TO 1913 AVERAGE MILLAGE LEVIES BY COUNTIES.

County	Rural	Urban

OVER AVERAGE 1910-1913 LEVIES, BY COUNTIES.

III. DISTRIBUTION OF RURAL LEVIES AND TAXES BY SECTIONS

The following series of tables present the tax levies and total taxes by sections or groups of counties. As explained in the introduction of this study, the state has been divided into four sections, the Willamette Valley counties including Columbia County, the coast counties, Southern Oregon counties, and Eastern Oregon counties. All levies are weighted levies on equalized valuations.

Weighted average levies on rural valuations by sections, 1910 to 1934. Weighted average levies on rural valuations for state, county, school, road, debt service, and miscellaneous purposes for each of the four groups of counties of the state are presented in Tables 75, 76, 77, and 78. The data cover the 25-year period, 1910 to 1934 inclusive. The trends of these levies are graphically shown in Figures 4, 5, 6, and 7.

These data permit of intergroup comparisons for similar functions as well as comparisons of levies and trends for different functions within the same group. In each of the four groups of counties the trend of school levies is most definitely and consistently upward. State levies which are uniform for the same year in all counties reached their highest point, 6.18 mills, on the 1921 assessment rolls. The highest points in road levies are reached from two to three years later in the different groups of counties. The general trend of county levies is slightly upward during the period.

Table 75. WEIGHTED AVERAGE TAX LEVIES IN MILLS ON EQUALIZED RURAL VALUATIONS FOR STATE, COUNTY, DEBT SERVICE, ROAD, SCHOOL, AND MISCELLANEOUS PURPOSES FOR THE ASSESSMENT YEARS 1910 TO 1934, INCLUSIVE.

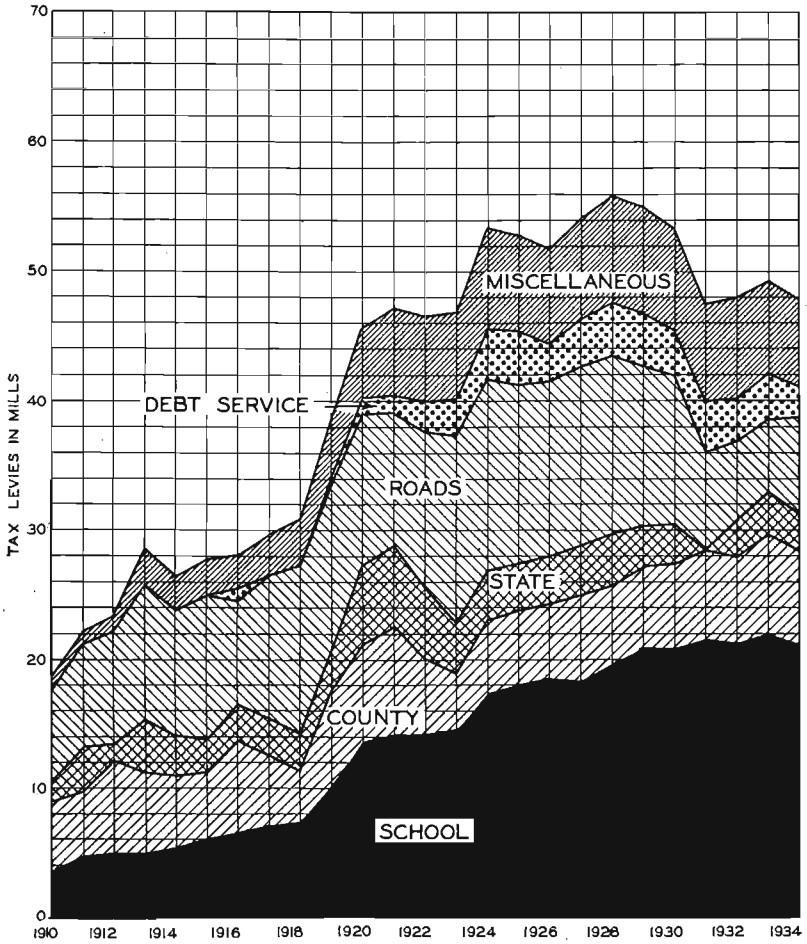

Fig.5. WEIGHTED AVERAGE LEVIES ON RURAL VALUATION, WILLAMETTE VALLEY, 1910-1934.

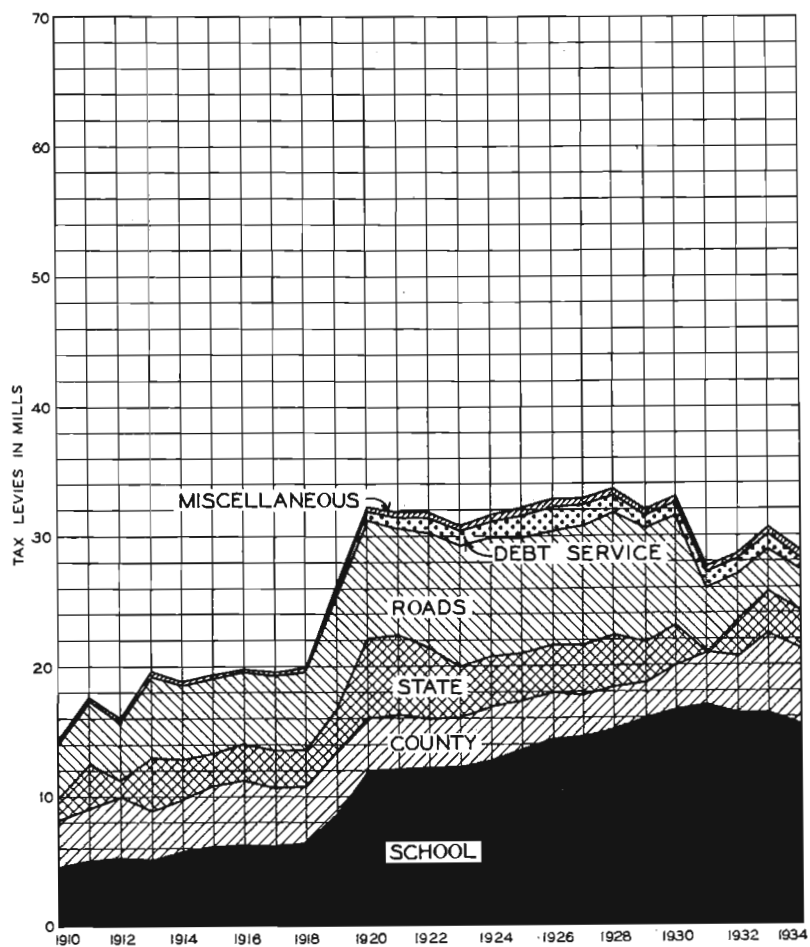

Fig. 6. WEIGHTED AVERAGE LEVIES ON RURAL VALUATION, SOUTHERN OREGON COUNTIES, 1910-1934.

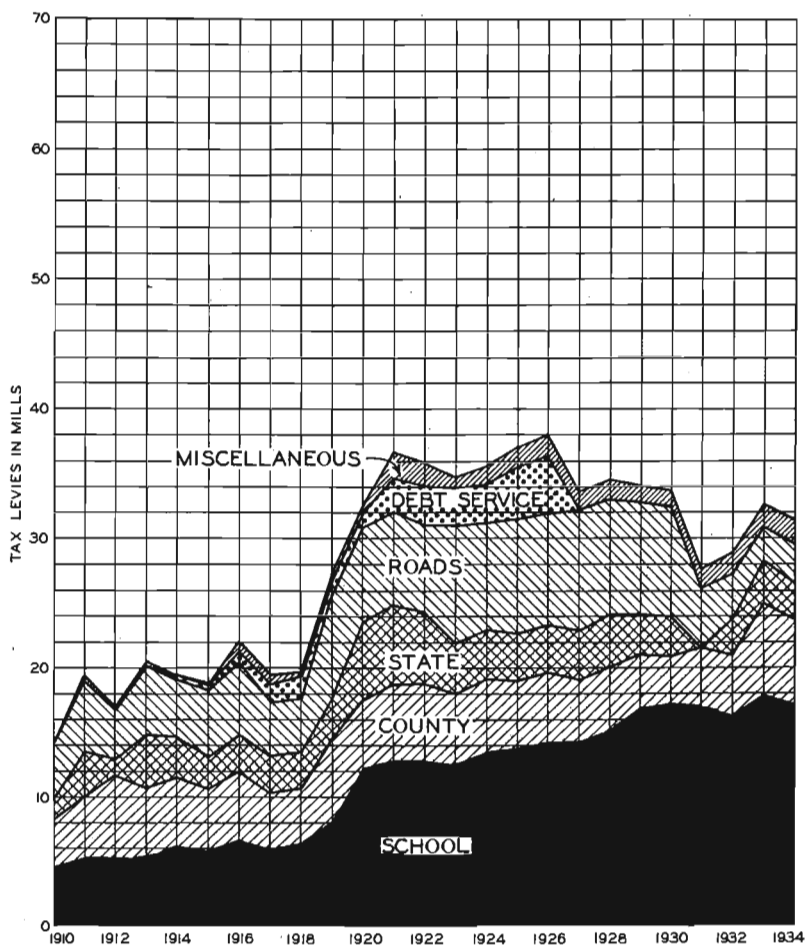

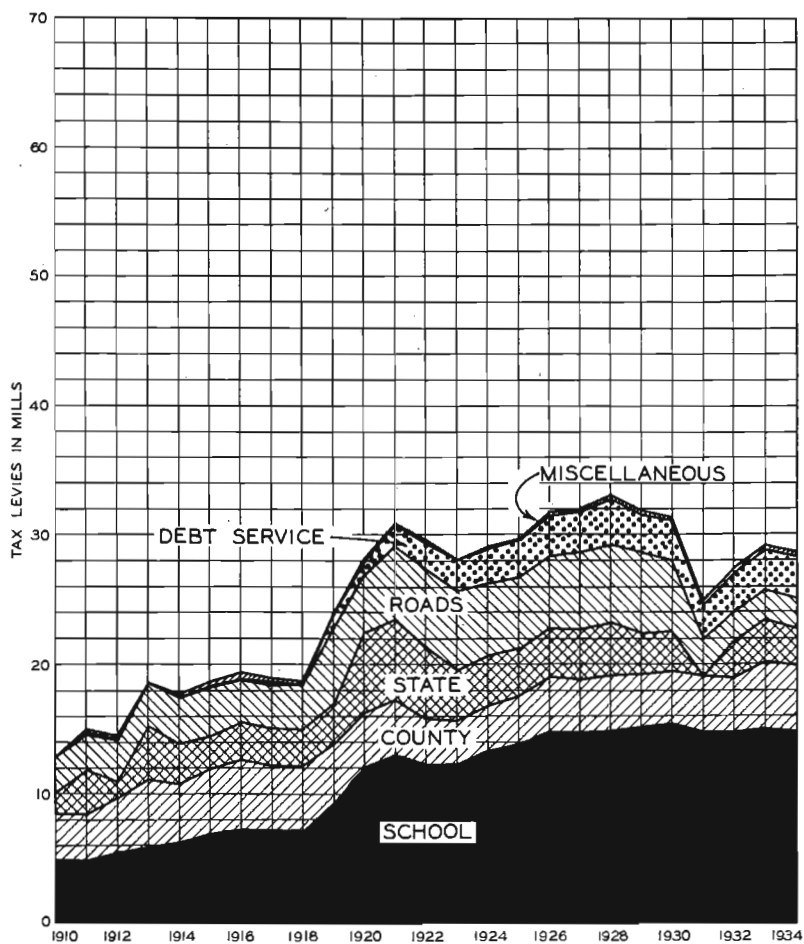

FIG. 7. WEIGHTED AVERAGE LEVIES ON RURAL VALUATION, EASTERN OREGON COUNTIES, 1910-1934.

Percentage of distribution of rural levies. An analysis of Tables 79, 80, 81, and 82, and Figures 8, 9, 10, and 11, based respectively upon these tables, leads to the following generalizations: Of total weighted rural levies, state levies have averaged 8.6 per cent in coast counties, 12.1 per cent in Southern Oregon counties, 12.8 per cent in Willamette Valley counties, and 13.7 per cent of total levies in Eastern Oregon counties during the 25-year period under investigation.

The trend of these state levies, somewhat erratic in each of the four sections during the entire period, indicates no general deviation from the horizontal during the early 10 or 12 years of the period. Following this early period, however, there is a gradual but general recession. High points reached in the years 1920 and 1921 were due to newly enacted millage laws. Revenues derived from independent sources, especially from income and excise taxes, account for the decline of the state levies in terms of total general property levies in the more recent years.

In anticipation of adequate funds from independent sources, no property levy for general state purposes was placed upon the 1931 assessment rolls.

The three most important rural property levies are those for county, road, and school purposes. Of total rural levies, those for general county purposes have averaged 16.7 per cent in coast counties, 17.1 per cent in Willamette Valley counties, 19.2 per cent in Eastern Oregon counties, and 19.9 per cent of the total levies in Southern Oregon counties. These levies, therefore, have approximated one-fifth of the total taxes imposed on assessable rural property. The general trend of these levies in percentages of total levies has been downward from 1910 to 1933, after which a slight rise is perceptible in most of the counties.¹

No marked trends are discernible in road levies in the Willamette Valley, the Eastern Oregon, and the Southern Oregon groups of counties from 1910 to 1930 when measured in percentages of total rural levies. A slightly downward trend is noticeable, however, during this period in the coast group of counties.

Since the year 1930 road levies in all sections have taken a rather precipitous drop due to repeal of road millage laws and the increasing activity of the state in the construction and maintenance of many of the principal highways in the state.

Of total rural levies, those for roads and highways have averaged during the 25-year period, 17.1 per cent in Eastern Oregon counties, 22.4 per cent in Southern Oregon counties, 26 per cent in Willamette Valley counties, and 28 per cent in the coast groups of counties.

Approximately 25 per cent of all rural general property taxes during the period from 1910 to 1934 has been expended in the construction and maintenance of public roads and highways in the state.

¹Itemized county expenditures—the following purposes are among the more important for which the revenues from county levies are expended:

Maintenance of the following county offices: Assessor, sheriff, clerk, treasurer, school superintendent, surveyor, and recorder;
Court expenses including district attorney's office, county court, circuit court, justice court, and juvenile court;
Charities and corrections including poor relief, widows' pensions, indigent soldiers, and jail;
Miscellaneous items such as health nurse, county agent, elections, fruit inspection, forest protection, cattle indemnity, and sealer of weights and measures.

Of all the rural general property taxes, the levies for public school purposes stand out as the most important. Of total rural taxes for the 25 years under consideration, the levies for the maintenance of public schools have averaged 30.2 per cent in coast counties, 38.8 per cent in Southern Oregon counties, 40.2 per cent in Willamette Valley counties, and 42.7 per cent in Eastern Oregon counties. The second distinguishing characteristic of these levies is that the trend has been universally and markedly upward, reaching on the 1934 tax rolls 44 per cent of total levies in coast counties, 51 per cent in Eastern Oregon counties, 53 per cent in Willamette Valley counties, and 54 per cent of total levies in Southern Oregon counties.

Of total rural levies, those for debt service have averaged 2.4 per cent in Willamette Valley counties, 3.5 per cent in Southern Oregon counties, 4.0 per cent in coast counties, and 5.7 per cent in Eastern Oregon counties. The trend in levies for debt service has been generally upward in each of the four groups of counties. In the Southern Oregon group of counties, however, no levies for debt service are recorded after the year 1926. The county debts were largely taken care of out of the Oregon and California land grant refunds.¹ In each of the 18 counties that are recipients of these federal tax refunds, varying amounts have been paid into county and road funds. The levies for these functions during recent years, therefore, are not truly representative of the public expenditures for the same.²

Rural levies for miscellaneous purposes are unimportant with the exception of those in the coast counties where they average 12.2 per cent of total levies, due to the inclusion of port expenses in this classification.

Table 79. TAX LEVIES ON EQUALIZED RURAL VALUATIONS FOR STATE, COUNTY, DEBT SERVICE, ROAD, SCHOOL, AND MISCELLANEOUS PURPOSES IN PERCENTAGES OF TOTAL WEIGHTED LEVIES FOR THE ASSESSMENT YEARS 1910 TO 1934, INCLUSIVE.

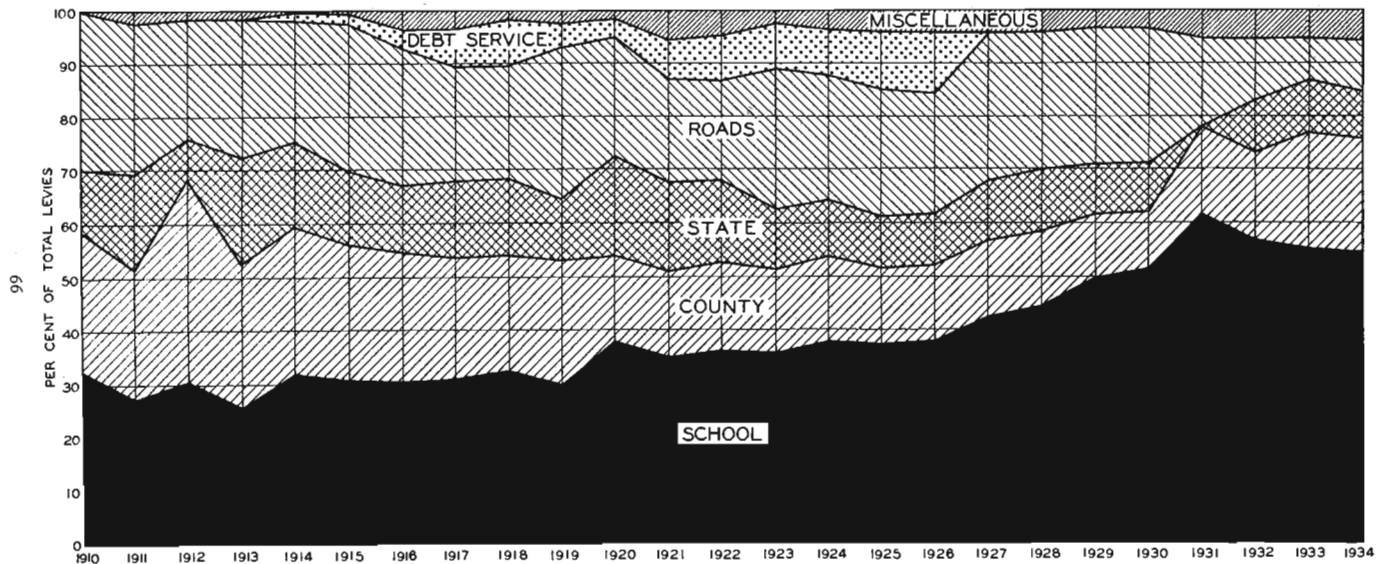

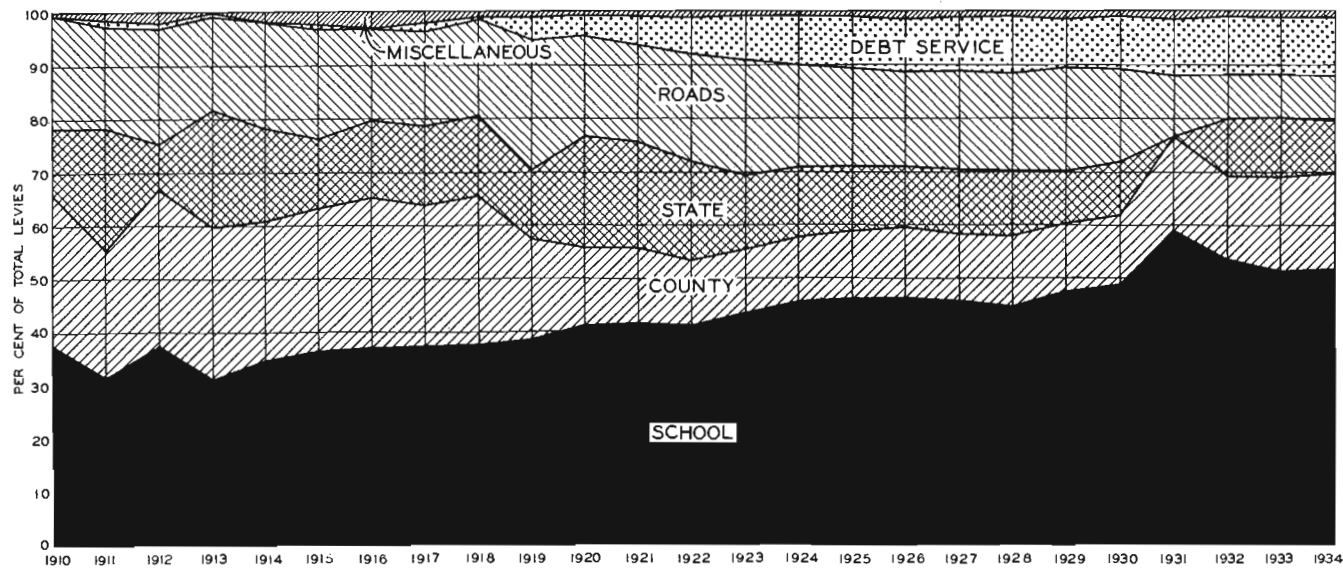

Fig. 11. TAX LEVIES ON RURAL VALUATION OF EASTERN OREGON COUNTIES IN PERCENTAGES OF TOTAL WEIGHTED LEVIES FOR PURPOSES INDICATED. 1910-1934.

Rural taxes by functions and groups of counties. Rural taxes by functions and groups of counties for the years 1910 to 1934, inclusive, are presented in Tables 83, 84, 85, and 86. The peak of total taxes levied was reached in the Willamette Valley counties, Eastern Oregon, and coast counties in the 1928 assessment year and in the Southern Oregon counties in the 1926 assessment year.

Trend in total rural taxes in percentages of the 1910 to 1913 average tax. The trends of rural taxes by functions and groups of counties in percentages of the 1910 to 1913 average taxes are found in Tables 87, 88, 89, and 90.

Of the four rural taxes of major importance—state, county, school, and road taxes—school taxes indicate the greatest percentage of increase throughout the period over the 1910 to 1913 average. The high peaks in percentage of increase are reached in the year 1930 in all sections but the coast counties, in which the recession begins in 1928. Road taxes show the greatest recession in all sections during recent years. Since the annual levies for state purposes are uniform in all counties, a higher percentage of increase in state taxes for some sections than in others indicates a relatively greater increase or relatively smaller decrease in the equalized values in the former sections.

The percentage changes are frequently extreme and erratic. This is particularly true in county and road levies.

¹Percentages based on 1911 to 1913 average tax.

Total taxes on rural property by major divisions. Total taxes on rural property by major divisions in terms of the 1926 all-commodity index dollar are presented in Table 91. The peak in the total rural taxes in terms of the 1926 dollar was reached in the 1932 assessment year, followed by an appreciable recession during the two following years. The peak of actual rural taxes was reached in the 1928 assessment year. These data would warrant the conclusion that the recession in public expenditures during the recent depression years can be partly accounted for by the increased purchasing power of the dollar, and not altogether by a retrenchment in the number and quality of public service.

Trends in total rural taxes. The data in Table 92 indicate the trends in taxes, in terms of the 1926 all-commodity index dollar, imposed upon the rural taxable property of each of the four groups of counties. The taxes for each of the 25 years are presented in percentages of the 1910 to 1913 average tax. The trends are graphically presented in Figure 12. The 1934 rural taxes in percentages of the 1910 to 1913 average are for Southern Oregon counties 125, for Willamette Valley counties 170, for Eastern Oregon counties 175, and for the coast group 176. The 1934 taxes in every instance indicate a recession from a previously higher tax.

Table 92. TREND OF TOTAL TAXES (REDUCED TO THE 1926 ALL-COMMODITY INDEX) UPON RURAL TAXABLE PROPERTY IN PERCENTAGES OF THE 1910 TO 1913 AVERAGE TAX.

Year	All counties	Eastern Oregon counties	Southern Oregon counties	Willamette Valley counties	Coast counties

Total rural taxes, 1910 to 1934. Total rural taxes by functions and spending units for the period 1910 to 1934 are presented in Table 93. These data indicate trends and admit of comparisons between functions.

State taxes reached their peak in the year 1920, road taxes in 1928, school taxes in 1930, and county taxes in 1933.

Per capita rural taxes, census years. Rural per capita taxes by functions and sections for the census years 1910, 1920, and 1930 are found in Table 94. The population of all incorporated places, irrespective of size, is excluded.

The following observations are based upon a review of the table. The per capita rural school taxes are the only important rural taxes that indicate a continued rise throughout the period. In the case of all the other important taxes, the 1930 per capita taxes show a recession from the 1920 taxes. The miscellaneous taxes for the coast counties are high because of the inclusion of outlays for ports.

IV. DISTRIBUTION OF URBAN LEVIES BY COUNTIES

In the following series of tables tax levies are presented by counties and functions for the 25-year period, 1910 to 1934, inclusive. The years in all cases are the assessment years unless otherwise indicated. Urban property includes the property of all incorporated places in the state, irrespective of their size. Curry County contains no incorporated cities and therefore does not appear in the list of counties.

Tables 95 to 164 inclusive contain two series of statistical compilations on urban tax levies, corresponding to Tables 1 to 72 on rural levies. In the one series of tables are found the weighted average levies in mills on urban assessable property for state, county, school, road, special city, debt service, and miscellaneous purposes, and in the other series of tables are contained the tax levies for the designated purposes in percentages of total weighted levies.

The tables are arranged alphabetically according to counties, the table containing the levies in mills immediately preceding the table of the corresponding county indicating the same levies in percentages of total levies.

The tables admit of intercounty comparisons of levies and trends in levies for the various functions covering the 25-year period 1910 to 1934.

In terms of actual levies, the most obvious upward trends are found in the levies for school and special city purposes.

Table 95. WEIGHTED AVERAGE TAX LEVIES IN MILLS ON EQUALIZED URBAN VALUATIONS FOR STATE, COUNTY, SCHOOL, ROAD, SPECIAL CITY, DEBT SERVICE, AND MISCELLANEOUS PURPOSES FOR THE ASSESSMENT YEARS 1910 TO 1934, INCLUSIVE.

V. DISTRIBUTION OF URBAN LEVIES BY SECTIONS OR GROUPS OF COUNTIES

For the purpose of comparing urban taxes and tax levies of the different sections of the state, a grouping of the counties into sections similar to that followed in the study of rural levies has been made, with the exception that Multnomah County has been treated independent of the other Willamette Valley group. Curry County also does not appear in the coast county group for the reason that it contains no incorporated places. All levies are weighted levies for the group under consideration.

Weighted average levies on urban valuation by sections, 1910 to 1934. Weighted average levies on urban valuations for state, county, school road, special city, debt service, and miscellaneous purposes for each of the four groups of counties of the state and for Multnomah County are presented in Tables 165, 166, 167, 168, and 169. Multnomah County is treated independently of the other Willamette Valley counties because of the relatively large size of the city of Portland. The trends of the various levies for the 25-year period are graphically shown in Figures 13, 14, 15, 16, and 17.

Intergroup comparisons of these levies and trends indicate considerable similarity. The two levies of outstanding importance in all groups of counties as well as in Multnomah County are the school and special city levies. These levies not only constitute a large percentage of the total levies but their trend is consistently and sharply upward. State levies are necessarily uniform in all groups and counties on both urban and rural valuations with the highest peak in the 1921 assessment year.

(exclusive of Multnomah County)

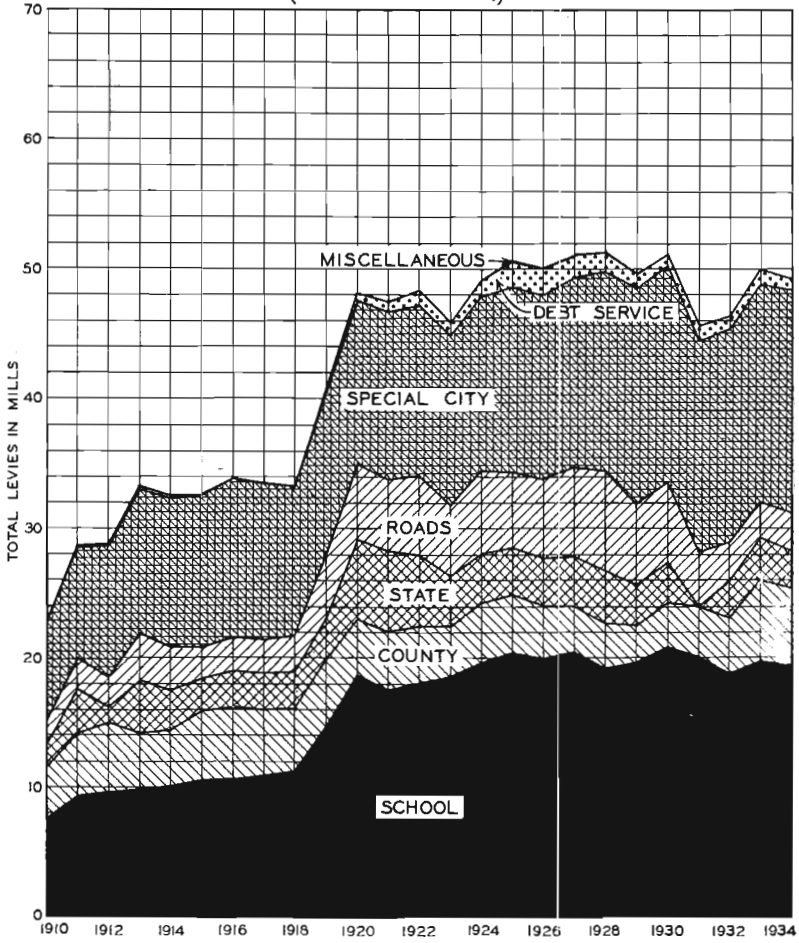

Fig. 15. WEIGHTED AVERAGE LEVIES ON URBAN VALUATION, SOUTHERN OREGON COUNTIES, 1910-1934.

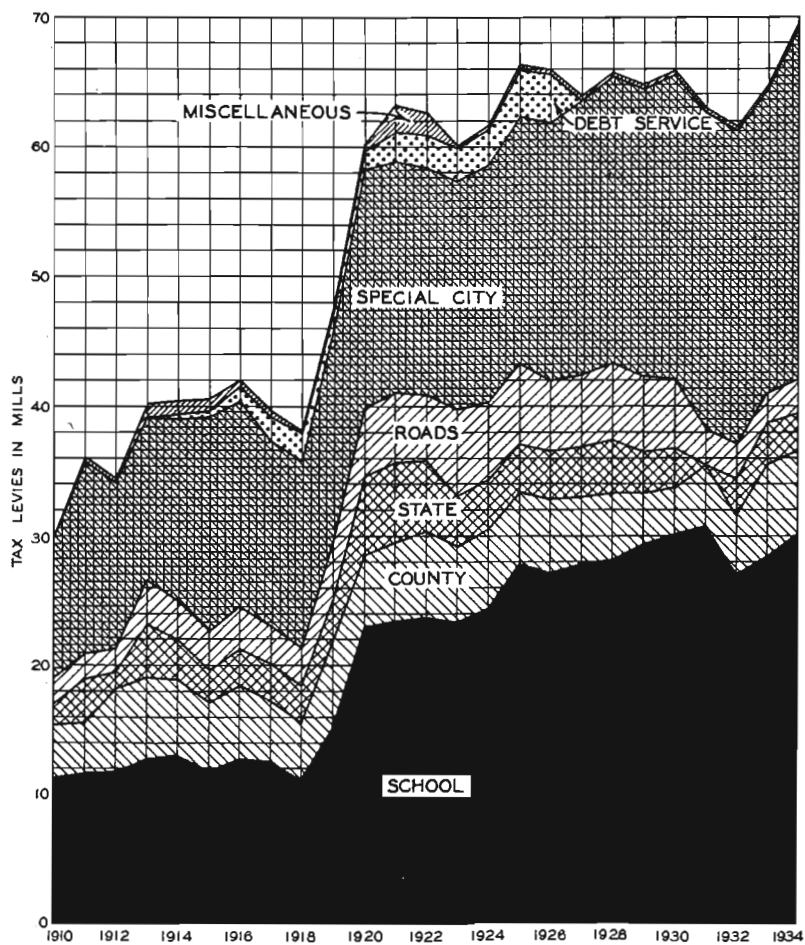

Fig. 16. WEIGHTED AVERAGE LEVIES ON URBAN VALUATION, EASTERN OREGON COUNTIES, 1910-1934.

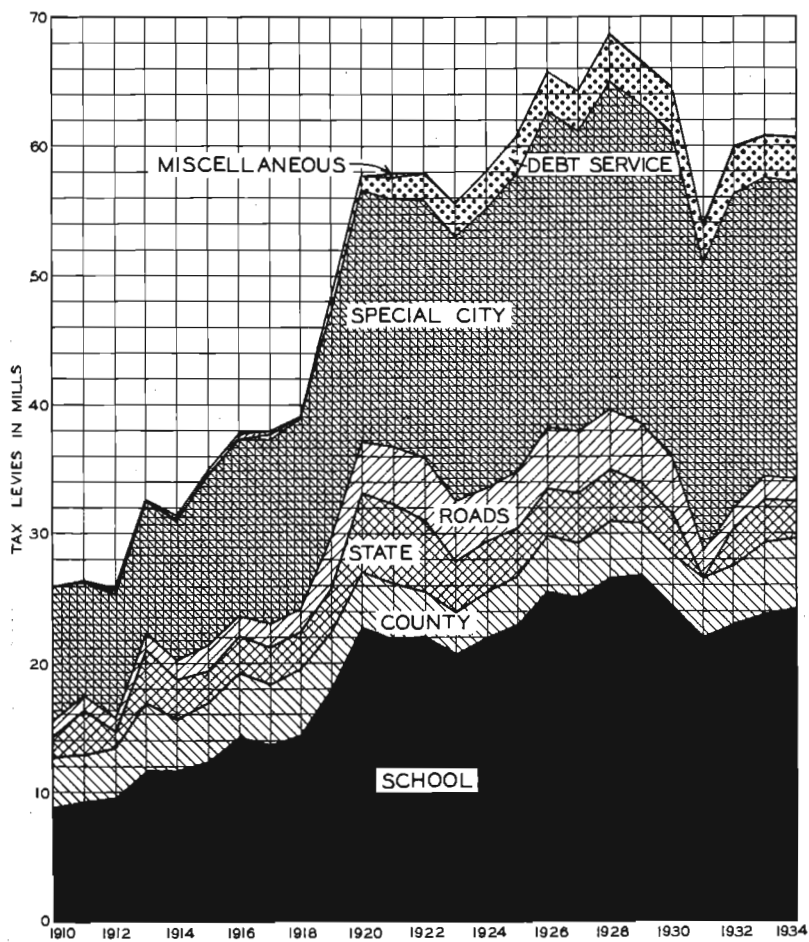

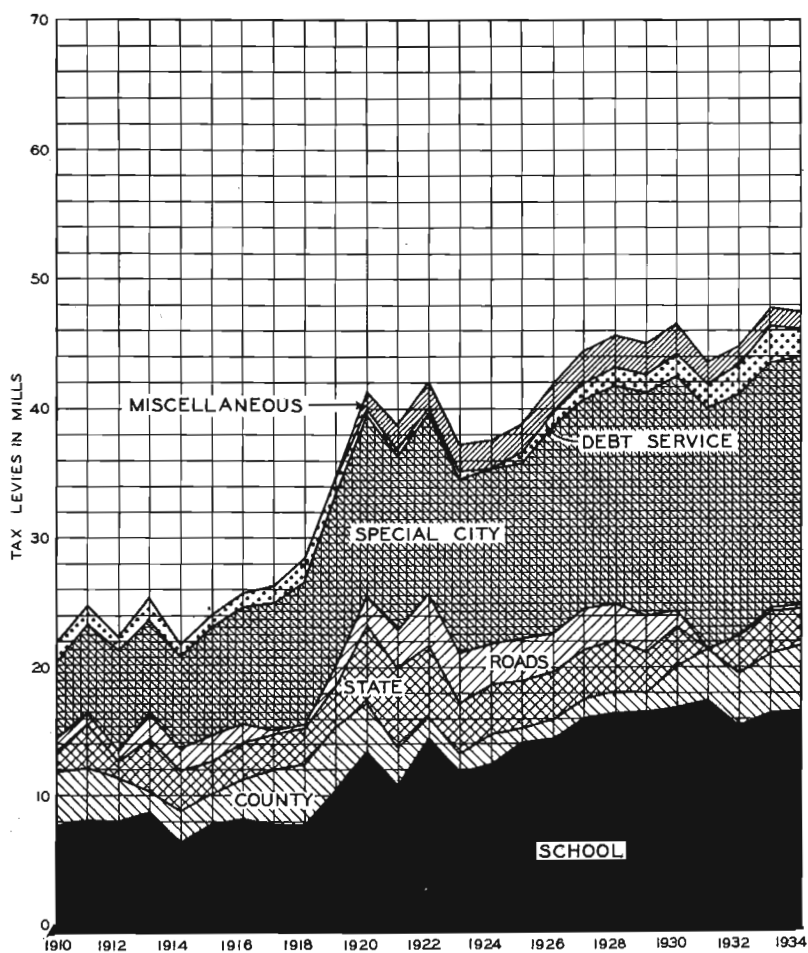

Fig. 17. WEIGHTED AVERAGE LEVIES ON URBAN VALUATION, MULTNOMAH COUNTY, 1910-1934.

Percentage distribution of urban levies. Figures 18, 19, 20, 21, and 22 are based respectively upon Tables 171, 172, 173, 174, and 175. Making due allowance for "special city" levies the percentage distribution of urban levies and trends in levies for the various functions in the different sections of the state do not vary greatly from the distribution and trends of levies in the rural areas. State levies in percentages of totals reached their peaks during the years 1920 and 1921, with a slight recession during more recent years. County levies in terms of aggregate levies show a rather precipitous drop during the period 1917 to 1920. Thereafter, little change in trend is evident until about 1933, when there is a definite rise.

The levies for debt service are for county debts. These levies in only a few instances exceed 4 or 5 per cent of total levies. Levies for debts incurred by cities are included in special city levies. Levies for miscellaneous purposes are of minor importance with the exception of those in Multnomah County and the coast counties.¹ In these counties port charges are included under miscellaneous expenses.

Levies for roads in terms of total levies show frequent and marked changes from year to year. In all groups of counties the levies during the last four or more years of the period under investigation have been below the averages for the entire period. This decline, as in the case of the rural levies, is due to the increasingly large part played by the state in the construction and maintenance of roads and highways.²

The two urban levies of outstanding importance are the school and special city levies. In each of the groups of counties, as well as in Multnomah County, these levies have in the aggregate approximated or exceeded two-thirds of the total levies on general property. Although the trend is not marked, there is discernible an upward trend in the school levies in each of the groups of counties. In Multnomah County the data is somewhat erratic, with no general deviation from the horizontal.

A perceptible upward trend is evident in the special city levies in the coast counties where the rise is from 27 per cent of total levies on the 1910 assessment rolls to 36 per cent of total levies on the 1934 rolls. Likewise in Multnomah County the rise is from 27 per cent of total levies on the 1910 rolls to 40 per cent on the 1934 rolls. In the Willamette Valley counties, Eastern Oregon counties, and Southern Oregon counties no trend in percentage change is evident.

In the following table, Table 170, is given the 25-year average percentage distribution of urban levies among the various functions in the different sections of the state and in Multnomah County.

Table 170. TWENTY-FIVE YEAR AVERAGE PERCENTAGE DISTRIBUTION OF URBAN LEVIES BY FUNCTIONS.³

Area	Total	State	County	School	Road	Special city	Debt service	Miscellaneous
Coast counties	100	5.10	9.53	28.85	12.21	34.28	1.85	8.18
Willamette Valley counties	100	8.00	11.49	36.85	10.17	31.86	1.54	.09
Southern Oregon counties	100	6.31	10.70	38.04	7.52	34.42	1.92	1.09
Eastern Oregon counties	100	6.98	9.62	37.64	5.73	36.73	3.01	.29
Multnomah County	100	9.65	9.02	33.68	5.12	35.87	1.75	4.91

¹Due to the predominant position of the city of Portland among Oregon cities, Multnomah County has been treated separately from the Willamette Valley group of counties.

²Levies classified here as urban road levies include only road district, and county-wide and state-wide road levies imposed upon urban taxable property.

³The unweighted arithmetical averages of the 25-year data are given.

Table 171. TAX LEVIES ON EQUALIZED URBAN VALUATIONS FOR STATE, COUNTY, DEBT SERVICE, ROAD, SCHOOL, SPECIAL CITY, AND MISCELLANEOUS PURPOSES IN PERCENTAGES OF TOTAL WEIGHTED LEVIES FOR THE ASSESSMENT YEARS 1910 TO 1934, INCLUSIVE.

Urban taxes by functions and groups of counties. Urban taxes by functions and groups of counties for the 25-year period under investigation are given in Tables 176, 177, 178, 179 and 180. The peak of total urban taxes levied was reached in the coast counties in 1924, in Eastern Oregon counties in 1928, and in Multnomah County, Willamette Valley counties, and Southern Oregon counties in the 1930 assessment year. The two most important taxes in all groups as well as in Multnomah County are the school and special city taxes.

Trend of total urban taxes in percentages of the 1910 to 1913 average tax. The trends of urban taxes by functions and groups of counties in percentages of the 1910 to 1913 average taxes are presented in Tables 181, 182, 183, 184, and 185. Multnomah County is again treated independently of the other counties in the Willamette Valley group.

Among the five most important urban taxes, school taxes and special city taxes contend with each other for first place in percentage rise over the 1910 to 1913 average tax. In the Eastern Oregon, Southern Oregon, and Willamette Valley groups of counties the percentage rise in school taxes exceeds the percentage rise in special city taxes, whereas in the coast group and in Multnomah County the percentage increase in special city taxes exceeds the increase in school taxes.

The greater increase of urban taxable values as compared with rural values accounts for the greater percentage increase of urban taxes for general state purposes.

¹Percentages based on 1920 to 1923 average tax.

Total taxes on urban property by major divisions. Total taxes on urban property by major divisions in terms of the 1926 all-commodity index dollar are given in Table 186. The peak in total urban taxes in terms of the 1926 index dollar was reached in the 1932 assessment year, whereas the peak in actual urban taxes was reached in the 1930 assessment year.

It is evident from these data that the recession in actual urban public expenditures during the recent depression years is to some degree accounted for by the rise in the purchasing power of the dollar.

Trends in total urban taxes. The data in Table 187 indicate the trend in total taxes in terms of the 1926 all-commodity index dollar imposed upon the urban property in each of the four groups of counties and in Multnomah County. The taxes for each year are presented in percentages of the 1910 to 1913 average tax. The 1934 urban taxes in percentages of the 1910 to 1913 average taxes for Multnomah County are 180, Southern Oregon counties 202, Willamette Valley counties 229, Eastern Oregon counties 267, and coast counties 286.

The trends are presented graphically in Figure 23.

FIG.23. URBAN TAX TRENDS. (REDUCED TO 1926 ALL COMMODITY INDEX.)

Total urban taxes, 1910 to 1934. Total urban taxes by functions and spending units for the period 1910 to 1934, are presented in Table 188. The data in this table are most clearly indicative of the constantly mounting tax load imposed upon general property. The peak for state taxes was reached in 1920, for road taxes in 1927, for school and special city taxes in 1930 and for county taxes in 1934.

Table 188. TOTAL TAXES LEVIED ON URBAN GENERAL PROPERTY FOR STATE, COUNTY, SCHOOL, ROAD, SPECIAL CITY, DEBT SERVICE, AND MISCELLANEOUS PURPOSES FOR THE ASSESSMENT YEARS 1910 TO 1934, INCLUSIVE.

Per capita urban taxes by census years. Urban per capita taxes by functions and groups of counties for the census years 1910, 1920, and 1930 are presented in Table 189. The population of all incorporated places in the state are included under urban population.

The following observations are based upon a review of the tables. The per capita urban school taxes and special city taxes, as well as the per capita total urban taxes levied in the census years show a general rise throughout the period in all divisions of the state. The 1920 tax increases over the 1910 taxes, however, in almost every instance are much greater than the 1930 increases over the 1920 taxes. The 1920 per capita state, county, and road taxes, with a few exceptions, are higher than the 1930 taxes.

Table 189. URBAN PER CAPITA TAXES BY SECTIONS AND CENSUS YEARS FOR PURPOSES INDICATED.

Section	Total	State	County	School	Roads	Special city	Debt service	Miscellaneous
<i>Coast counties</i>								
1910	\$18.23	\$ 1.06	\$ 3.34	\$ 5.32	\$ 3.01	\$ 4.89		\$.61
1920	51.54	4.29	4.07	17.17	6.54	14.50	\$.96	4.01
1930	61.97	1.92	4.78	18.18	3.54	25.05	2.09	6.41

VI. CONCLUSIONS

Three major changes or trends in our economic and political life are complicating the tax problem in our state. Allowing for occasional and temporary recessions, the most important economic change is found in our increasing wealth and income and a resulting rise in our standard of living, both public and private.

The general rise in tax levies and in total taxes during the past 25 years is evidence of the people's effort to maintain a public standard of living commensurate with, if not in advance of, the rising standards in private living.

Increasing expenditures for the maintenance of our public schools is indicative of the people's demand for the intangible values in education, and the increasingly large outlays for roads and highways are a measure of the public's willingness to be taxed both directly and indirectly for improved transportation.

Not only are more services demanded from the government, but services of a higher quality.

The second major trend, both economic and political in character, is increased centralization in the administration of public functions. Both state and local boundaries are tending to become less distinct. The construction and maintenance of roads and highways, an enterprise of less than county-wide scope a few decades ago, has become state- and nation-wide. State highway policing is encroaching upon the activities of local peace officers. State and federal subventions to education, business enterprise, and to relief are on the increase, and state regulations of various interests are superseding local control.

The third major change is modification in our tax base.

Pursuant to the constitutional provision authorizing classification of our general property for taxation purposes the general property tax base has become narrowed.

Intangible personal property, with minor exceptions, has disappeared from the assessment rolls with the enactment of the intangible income tax law, and bank property, other than real estate, was lost to the rolls with the enactment of the corporation excise tax law. Our modern means of conveyance, the passenger car and the truck, have replaced the horse-drawn vehicle, but not on the tax rolls. Household goods and other personal property, educational, church, and lodge property and municipally-owned utilities are exempt from the general property levy.

Furthermore, the tapping of various sources of revenue through both state and national laws, such as the income tax, sales tax, and inheritance tax laws, directly and indirectly drains the tax-paying ability of the local community.

These three phases of our tax problem are inextricably interrelated and there can be no permanent and economically sound improvement in our tax system that does not take cognizance of each of these factors. No changes in our tax system are just and fair unless economically sound. The criterion of the justice of any tax system is its economic soundness.

The increasing levies due to growing public expenditures and the narrowing of the general property tax base tend to impose a greater burden upon the rural than upon the urban taxpayer.

Any tax relief resulting from the removal of intangibles from the assessment rolls or from the exemption of other properties such as churches, lodge property, and publicly-owned utilities tends to inure very largely to the benefit of the urban taxpayer.¹ Such property not only does not contribute toward the maintenance of local functions, but likewise fails to contribute toward the maintenance of functions supported by state-wide and county-wide levies.

Rising tax levies also leave the rural taxpayer in a less advantageous position than the urban taxpayer because of his inability to shift taxes. Tax shifting is dependent upon price control through control of supply. This control the farmer does not possess. In growing urban communities high levies may retard the construction of improvements and indirectly the taxes may be passed on in the form of higher rent charges.

To what extent state and national income tax levies, for the greater part initially paid by the urban taxpayers, both individually and as business units, are indirectly shifted to the rural community defies analysis. The more intricate problems of tax shifting may never be solved. On the other hand, we have no way of measuring the benefits that accrue to the rural community from the expenditure of state- and nationally-collected revenues upon public enterprises such as the conservation of natural resources, highway construction, research, and the protection of life and property itself.

Measurable and permanent relief from burdensome general property tax levies is only attainable through more centralized administration and financing of governmental functions. State and federal highway construction and maintenance might be extended to include all public roads within the state. State policing would thereby be automatically extended. Our public school system, decentralized both administratively and financially, might be abandoned for a more highly centralized and more efficiently managed system. Increasingly more of our local functions might be allocated to the state.

But centralized financing and centralized administration are generally closely interrelated. Appreciable relief from the general property tax burden, therefore, will be at the expense of much of our cherished local autonomy.

Any program of centralized financial support unaccompanied by centralized administration should be carefully scrutinized in the light of its effect upon the perpetuation of inefficiently and wastefully managed local activities and institutions.

¹The author does not hereby admit the logic or the justification of taxing intangibles or claims to wealth. The intangibles income tax as well as the corporation excise tax tends to amend for the intangibles tax exemptions.

STAFF OF AGRICULTURAL EXPERIMENT STATION

*Staff members marked * are United States Department of Agriculture
investigators stationed in Oregon*

Geo. W. Peavy, M.S.F., Sc.D.....	President of the State College
Wm. A. Schoenfeld, B.S.A., M.B.A.....	Director
R. S. Besse, M.S.....	Vice Director
Esther McKinney.....	Accountant
Marie Dew.....	Secretary

Division of Agricultural Economics

E. L. Potter, M.S.....	Agricultural Economist; in Charge, Division of Agri. Economics
	<i>Agricultural Economics</i>

W. H. Dreesen, Ph.D.....	Agricultural Economist
	<i>Farm Management</i>

H. D. Scudder, B.S.....	Economist (Farm Management)
H. E. Selby, M.S.....	Economist (Farm Management)
G. W. Kuhlman, M.S.....	Associate Economist (Farm Management)
A. S. Burrier, M.S.....	Associate Economist (Farm Management)
E. B. Hurd, M.S.....	Assoc. Economist, Div. of Farm Mgt., Bur. of Agric. Economics

Division of Animal Industries

P. M. Brandt, A.M.....	Dairy Husbandman; In Charge, Division of Animal Industries
	<i>Animal Husbandry</i>

O. M. Nelson, M.S.....	Animal Husbandman
R. G. Johnson, B.S.....	Animal Husbandman
A. W. Oliver, M.S.....	Assistant Animal Husbandman

Dairy Husbandry

Gustav Wilster, Ph.D.....	Dairy Husbandman (Dairy Manufacturing)
I. R. Jones, Ph.D.....	Associate Dairy Husbandman

Fish, Game, and Fur Animal Management

R. E. Dimick, M.S.....	Assistant in Charge
------------------------	---------------------

Poultry Husbandry

H. E. Cosby.....	Poultry Husbandman
F. L. Knowlton, M.S.....	Poultry Husbandman
F. E. Fox, M.S.....	Associate Poultry Husbandman

Veterinary Medicine

B. T. Simms, D.V.M.....	Veterinarian
W. T. Johnson, B.S., D.V.M.....	Poultry Pathologist
I. N. Shaw, B.S., D.V.M.....	Associate Veterinarian
R. Jay, D.V.M.....	Associate Veterinarian, Bureau of Animal Industry*
E. M. Dickinson, D.V.M., M.S.....	Assistant Poultry Pathologist
F. M. Bolin, D.V.M.....	Assistant Veterinarian*
O. H. Muth, D.V.M., M.S.....	Assistant Veterinarian
O. L. Searcy, B.S.....	Technician

Division of Plant Industries

G. R. Hyslop, B.S.....	Agronomist; In Charge, Division of Plant Industries
	<i>Farm Crops</i>

H. A. Schoth, M.S.....	Agronomist; Forage Crops and Disease Investigation*
D. D. Hill, Ph.D.....	Associate Agronomist
R. E. Fore, Ph.D.....	Assistant Agronomist*
B. B. Robinson, Ph.D.....	Assistant Plant Breeder, Fiber Flax Investigations*
Grace Cole Fleischman, A.B.....	Assistant Botanist, Division of Seed Investigations*
H. H. Rampton, M.S.....	Assist. Agronomist; Forage Crops and Disease Investigation*

Horticulture

W. S. Brown, M.S., D.Sc.....	Horticulturist
A. G. B. Bouquet, M.S.....	Horticulturist (Vegetable Crops)
E. H. Wiegand, B.S.A.....	Horticulturist (Food Products Industries)
