## S5 Fig. Effect of NAC on short-chain peptide levels in 3T3-L1 preadipocytes.

Changes in short-chain peptide levels in 2-day post-confluent 3T3-L1 preadipocytes after a 12 h incubation with various concentrations of *N*-acetylcysteine (NAC). Plain media served as a vehicle control.

Shown are means  $\pm$  SE, n=3. ND, not detected.
