

July 21, 2009

The Honorable Dianne Feinstein
331 Hart Senate Office Building
Washington DC 20510

Dear Senator Feinstein:

As the Senate moves ahead with further consideration of the FY2010 Energy and Water Development Appropriations bill, we the undersigned urge your support for the Department of Energy's "REgaining our ENERGY Science and Engineering Edge" (RE-ENERGYSE) program. The Administration requested \$115 million for this important new energy education and training program in its FY2010 budget request.

Unfortunately, the Senate Appropriations Committee approved no money for the program in its recent markup, and the House Appropriations Committee appropriated only \$7 million – falling far short of the Administration's \$115 million request. We urge the Senate and House to ensure the successful development of this program by meeting the full budget request.

As President Obama said in April: "The nation that leads the world in 21st century clean energy will be the nation that leads in the 21st century global economy... [RE-ENERGYSE] will prepare a generation of Americans to meet this generational challenge."

RE-ENERGYSE is an innovative program that will train America's future energy workforce, accelerate our transition to a prosperous clean energy economy, and ensure that we lead the world's burgeoning clean technology industries. According to the Department of Energy, the Higher Education subprogram alone would result in the development of leading edge undergraduate and graduate programs and enable between 5,000 and 8,500 highly educated scientists, engineers, and other professionals to enter the clean energy field by 2015. The total would rise to approximately 10,000 to 17,000 professionals by 2020.

America is in danger of losing its global competitiveness and the clean energy race without substantial new investments in science, technology, math, and engineering (STEM) education. China, South Korea, Japan, and other nations are seeking to quickly lead this sector by launching unprecedented public investment projects in their clean energy industries. China plans to invest \$440 to \$660 billion over the next decade to dominate markets in wind, solar, plug-in hybrid vehicles and more, while South Korea has committed to invest a full 2% of its GDP in a clean technology-driven growth strategy. Meeting this challenge and ensuring America's continued economic competitiveness will require a substantial federal commitment, including funding for new education programs that inspire the next generation of students to pursue careers in STEM fields. RE-ENERGYSE is designed to be just such a program.

The prosperity and security of the United States in the 21st century will depend on the course of action we take today on energy. To overcome our national energy challenges and rejuvenate our economic competitiveness, Congress must make new investments to educate, train and inspire the next generation of American energy scientists, engineers and entrepreneurs. We urge you to

fully fund the RE-ENERGYSE initiative for FY2010, and we thank you in advance for your support.

Sincerely,
