OREGON AGRICULTURAL COLLEGE

EXTENSION SERVICE.

RALPH D. HETZEL, Director

This leaflet has been prepared to accompany College Bulletin No 81, "Feeding for Eggs". Save all circulars and bulletins sent to you as they will soon be out of print.

The following questions are prepared mainly for the purpose of helping the reader to study the bulletin, "Feeding for Eggs." He may test his knowledge by answering the questions. This is not, however, an examination paper.

If this lesson is not clear to the reader on any point, we shall be glad to hear from him and will try to furnish any additional information that may be called for. The student, however, should remember that everything about poultry feeding cannot be put in type, and that after he has learned this lesson there will still remain abundant opportunity for some independent thinking on his part.

1. This subject is divided into two main parts. What are they?
2. Discuss briefly the effect of food on quality and quantity of eggs, as demonstrated by experiment.
3. What are the principal sources of our knowledge of poultry feeding?
4. Why should we study the composition of foods?
5. Name four kinds of foods that are necessary for egg production.
6. Discuss briefly the food values of wheat and corn for laying hens.
7. Why would a ration of either wheat or corn alone be unprofitable?
8. Good foods do not always produce good results—Why?
9. Describe a good ration for laying hens, but not necessarily a ration described in this bulletin.
10. What method of feeding would you follow?

Club members desiring any special information concerning their poultry work should write to the Department of Poultry Husbandry, Oregon Agricultural College, Corvallis, Oregon.
