

# Jointed Goat Grass

Scientific name: *Aegilops cylindrica*

By Gordon Cook, Sherman County Extension Agent  
Martin Zimmerman, Gilliam County Extension Agent  
Ronald Burr, Extension Agronomist, Oregon State University

Annual

1 to 2 feet tall

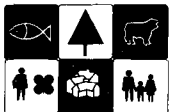

Leaves narrow, stiff and rough

Fibrous root and stem

Seed head  $1\frac{1}{2}$  to 5 inches long, breaking into segments  $\frac{1}{4}$  to  $\frac{1}{2}$  inches, each containing two seeds

Jointed Goat Grass has become a weed in wheat growing regions. It is sometimes found in seed as segments, about same size as large grain kernels.

Control: Roguing lightly infested fields. Spring seeding may be required for heavily infested fields. Trifluralin (Treflan) incorporated at seeding time has shown some promise. Incorporation should be shallow (2-3 inches) and wheat must be seeded below the level of incorporation or injury will occur.

OREGON STATE UNIVERSITY  
**EXTENSION  
SERVICE**

Extension Service, Oregon State University, Corvallis, Joseph R. Cox, director. This publication was produced and distributed in furtherance of the Acts of Congress of May 8 and June 30, 1914. Extension work is a cooperative program of Oregon State University, the U. S. Department of Agriculture, and Oregon counties.
