

Title: **Global Trends in Capture Fisheries, With an Estimate of Global Losses in Marine Fisheries Resource Rents**

Author(s): Rolf Willmann, Ragnar Arnason, Nicole Franz, Kieran Kelleher

Abstract: Trends in key fisheries indicators are presented to provide the context for a profile of the economic health of the world's marine fisheries. Estimates of the economic value of global marine fishery production and costs of production are used as inputs to an economic model to derive a range of estimates of potential economic rents lost, largely as a result of mismanagement of the marine fisheries worldwide.
